BULLETIN OF UNDERGRADUATE STUDIES

CONTINUING EDUCATION 1979—1980

CONTINUING EDUCATION
EVENING SCHOOL
OFFICE: Lower Level, Cumnock Hall
CALENDAR 1979-1980

FIRST SEMESTER (Sept. 1979)

August 27, 28, 29, 30; 6:30-8:00 p.m.	Registration
Monday through Thursday	
September 4, Tuesday	Classes Begin
October 8, Monday	Columbus Day Holiday
November 22 and 23	Thanksgiving Recess
Thursday and Friday	
December 20	End of First Semester

SECOND SEMESTER (Jan. 1980)

January 7, 8, 9, 10; 6:30-8:00 p.m.	Registration
Monday through Thursday	
January 14, Monday	Classes Begin
January 15, Tuesday	Martin Luther King Day
February 18, Monday	Washington's Birthday
April 21, Monday	Patriot's Day Holiday
April 28	End of Second Semester

SUMMER SESSION (May 1980)

Dates will be available in the Summer Evening Bulletin (April 1980)

YEAR 1980-1981
FIRST SEMESTER (Sept. 1980)

August 25, 26, 27, 28; 6:30-8:00 p.m.	Registration
Monday through Thursday	
September 2, Tuesday	Classes Begin

1979-1980 CLASS MEETING SCHEDULE

The Evening School class meeting schedule for 1979-1980 (see inside back cover) provides for the completion of the first semester prior to the Christmas recess and the completion of the second semester before May 1, 1980.

This rearrangement of class schedules provides the Evening School student an opportunity to accelerate his progress toward a degree thereby shortening the period of time to complete the graduation requirements.

BULLETIN OF UNDERGRADUATE STUDIES

Volume III, Number 1, August 1, 1979

Published by the University of Lowell, 1 University Avenue,
Lowell, Massachusetts 01854

Each undergraduate is expected to be familiar with the contents of this publication.

The rules and regulations published in this bulletin were in effect at the beginning of the 1979-1980 academic year and are subject to change through established procedures of the University. Changes in academic rules and regulations are effective at the beginning of the academic year following their adoption. Administrative regulations, including tuition and fee rates, are subject to change without advanced notice and are effective immediately upon adoption should authorities responsible for the development of such policies determine immediate implementation to be necessary. Listings of course offerings are subject to change by concerned departments and University administrators in the event that unforeseen faculty changes have taken place or insufficient numbers of students have subscribed to course offerings. The official schedule of course offerings for each semester is provided in the *Schedule of Classes*, which is published biannually by the Evening School.

The University of Lowell is an Equal Opportunity/Affirmative Action University and does not discriminate in employment or access to programs or services on the basis of race, sex, color, national origin, religion, handicap or veteran's status, and is in compliance with Title IX of the Education Amendments of 1972 and Section 504 of the Rehabilitation Act of 1973. Any inquiries and/or grievances may be referred to the Affirmative Action Officer, the Title IX Coordinator, the Handicapped Coordinator and/or to the Director, Office of Civil Rights, U.S. Department of Health, Education and Welfare, Washington, D.C.

GENERAL INFORMATION

History and Aims

The University of Lowell welcomes your interest as a prospective student. While a new school by virtue of 1973 Massachusetts legislation, the University of Lowell is actually a merger of two long-established educational institutions—Lowell State College and Lowell Technological Institute. These two components of the University represent a 161-year contribution to higher education dating back to the 1890's. Administration, faculty and resources of the two co-educational schools are now combined in the University of Lowell, an institution comprising seven colleges, a graduate school, continuing education and evening school facilities.

The aim of Continuing Education (which includes the Evening School) of the University of Lowell is to provide sound educational programs at both the graduate and undergraduate levels so that a student's years will be characterized by the growth of a mature and discerning mind, and the attainment of professional competence in a chosen field of concentration. Above all, Continuing Education seeks to prepare its students to be effective participants in the large community, and thus encourages the development of an awareness of the relations between the intellectual and technical skills mastered in the classroom and the society in which we live. Students, it is hoped, will gain here a spirit of free inquiry and a dedication to the service of society.

Facilities of the University

The 100-acre University of Lowell campus is divided into North and South campuses by the historic Pawtucket Falls of the Merrimack River. The buildings—most of which have been erected in the last 15 years—represent an investment of over 100 million dollars. Among the outstanding facilities are a 1 megawatt research nuclear reactor at the Pinaski Nuclear Center on the North Campus, and a multi-purpose music building on the South Campus, Cyrus Durgin Hall, which features a major auditorium for symphonic and operatic productions.

Dormitory residences range from small, formerly private homes, to an 18-story modern high rise.

Two library centers serve the University and maintain a growing collection of over 300,000 volumes and periodicals. There are, in addition, a variety of special resources at both libraries including music-listening rooms, and a media center with outstanding audio-visual facilities.

Continuing Education

Continuing Education oversees all education at the University other than full-time graduate and undergraduate programs. In operation day and night, twelve months of the year, Continuing Education offers both credit programs leading to a degree, and non-credit courses, scheduled at times convenient for those in the community who seek to accomodate study at the University to

their professional and domestic commitments. In addition to its full range of credit and non-credit offerings, Continuing Education's flexibility enables it to respond with a continually updated series of workshops and seminars to the professional advancement requirements of individuals and the immediate educative needs of industry.

Evening School

The Evening School component of Continuing Education offers a broad spectrum of courses to satisfy the educational needs of people who are restricted to evening attendance. Many Evening School students are transfer students from community colleges and other post-secondary institutions and veterans. The Evening School is particularly sensitive to the needs of people who seek vocational and professional career development. Programs are tailored so that the sequence of academic work will coincide with, and contribute to, systematic job progress over a period of years.

Graduate School

The following Graduate School degree programs are offered through the Evening School: Master of Science in Plastics, Computer Engineering, Electrical Engineering, Systems Engineering, and Mathematics (with options in Applied Mathematics, Mathematical Statistics and Actuarial Science, Pure Mathematics, and Mathematics for Teachers). Courses in the Master in Business Administration program are also offered through the Evening School. The graduate courses offered in the evening are equivalent in every respect to those offered in the day to full-time graduate students.

For further information concerning graduate programs please consult the Graduate School Catalogue. All inquiries regarding graduate programs should be addressed to the Graduate School, University of Lowell, Lowell, Massachusetts, 01854.

Accreditation and Professional Memberships

The University of Lowell is an accredited member of the New England Association of Schools and Colleges. Professional programs at the baccalaureate level are also accredited by the following national associations:

American Chemical Society

Engineers' Council for Professional Development

(Civil Engineering Technology, Mechanical Engineering Technology, Electronic Engineering Technology, Civil Engineering, Mechanical Engineering, Electrical Engineering, Chemical Engineering and Plastics Engineering.)

National Accrediting Agency for Clinical Laboratory Sciences

National Association of Schools of Music

National Council for the Accreditation of Teacher-Education

National League for Nursing

Accreditation indicates that the University is recognized and approved by regional and national associations concerned with the quality of higher education and it assures that study undertaken here has transfer value to other accredited institutions of higher education. The University is also a member in good standing of the following associations of higher education:

American Association of Colleges for Teacher Education
American Council on Education
Association for State Colleges and Universities
College Entrance Examination Board
National Association of Summer Sessions
National University Extension Association
New England Board of Higher Education

LIBRARY SERVICES

University Libraries

The University libraries, which consist of the Alumni-Lydon Library (North Campus) and the O'Leary Library (South Campus), have a seating capacity of 2,000. Present library holdings include over 300,000 books and periodicals and a large number of such non-print materials as audio recordings, video tapes, films, and microforms. The O'Leary Library has holdings in the humanities, fine arts, education, and music and houses the Educational Resources Information Center microfiche collection, 118 listening stations, and a collection of music scores. The Alumni-Lydon Library is rich in resources for science and business management fields. Special resources of the University libraries include rare books and artifacts relating to the history of the City of Lowell, the Boston and Maine Railroad Historical Society Collection, the Middlesex Canal Association, the Proprietors of the Locks and Canals on the Merrimack River, records of the Greater Lowell Chapter of the American Association of University Women, memorabilia of Harriet Farley Dunlevy (editor of the *Lowell Offering*), and 763 historical photographs. Other valuable resources include teacher-education curriculum materials, New England maps published by the Geological Survey of the U.S. Department of the Interior, gerontological resource materials, and educational media. The University libraries provide interlibrary loan services and also function as a U.S. Government depository.

Library Regulations

New students should have their pictures taken for an identification card at the beginning of the academic year. This photo-identification card must be presented upon request for admission to the library facilities and whenever a student wishes to take materials from a library. The identification card is valid until graduation, termination of enrollment, or revocation by the library director and is not transferable. The owner of the identification card is responsible for all material charged to his or her card until such time as library authorities have been informed that the card has been lost or stolen.

Students are not permitted to bring food or beverages into library areas and are prohibited from socializing, conversing, or generally engaging in activities which are contrary to that atmosphere which is conducive to research and study in a library setting. A student's library privileges, including the right to study in library areas, may be revoked when library rules concerning appropriate conduct have been violated. Such revocation of library privileges is entirely within the province of the Dean of Library Sciences.

Students who retain regular circulating materials for three or more weeks

beyond their authorized period of circulation, who retain reserve materials for two weeks or more beyond their authorized period of circulation, or who retain library materials after the beginning of the final examination period without explicit permission from the library staff shall forfeit their library privileges. Students who steal or maliciously deface library property forfeit their library privileges indefinitely. Reinstatement of library privileges may be granted only by the Dean of Library Services. Students who incur library fines, lose library materials, or damage library property must discharge their financial obligations to the University Library before the end of the semester in which such obligations have been incurred. Administrative dismissal from the University may be invoked when a student fails to comply, after due notice, with a direction to discharge library fines and obligations. Seniors who have not discharged their financial indebtedness to the University Library by the end of May will not be permitted to graduate until such time as they have discharged their indebtedness and their records have been cleared by the Business Office.

Library Fines

Library fines are levied according to the following schedule:

1. Overdue books and phonograph records:
 - a. Regular circulating books and phonograph records—\$.10 a day per book or record;
 - b. Reserve material—\$.25 per $\frac{1}{2}$ hour to a maximum of \$2.00 per book or record for the first day and \$1.00 per book or record for each succeeding class day per overdue item;
 - c. Recalled material—\$1.00 per day for each book or record to a maximum of \$10.00 per book or record;
2. Lost Library materials:
 - a. Replacement cost of lost material plus
 - b. Processing fee of \$3.00 per lost item.

3. Accumulated fines:

Students who have lost library materials and fail to notify library authorities of their loss within two weeks of the mailing of official notification of delinquency must pay accumulated fines up to \$10.00 per book or record plus the replacement and processing fees levied for each lost item.

Circulation Regulations

Books may be borrowed for a period of two to four weeks and may be renewed unless they have been requested by other students or by faculty members. No more than five books may be charged at one time to a student. Copies of reserve books are to be used for a period of two hours, at which time they may be recharged for an additional two hours if other students have not requested them. Reserve books which do circulate may be charged after 1 pm and are due at 9 am the following class day or (at the discretion of the library director for best accessibility) at some other designated time. Periodicals may not be taken from the Libraries. Students desiring to make extensive use of periodical articles are advised to make copies of the relevant portions of such articles on the self-operated photocopy machine. Students desiring to use periodicals, filmstrips, or microfilms within the Libraries must secure these materials

through the circulation desks. Curriculum materials in the O'Leary Library which are not considered reserve items circulate for the regular loan period. PE phonograph records circulate for a one-week period. PH and PL phonograph records located in the Music Listening Room of the O'Leary Library *do not circulate*.

Library Hours

Monday — Thursday	8:00 am — 10:30 pm
Friday	8:00 am — 5:00 pm
Saturday	9:00 am — 5:00 pm
Sunday	2:00 pm — 10:00 pm

Holiday hours for each of the Libraries will be posted. During vacations, the Libraries will be open from 8:00 am to 5:00 pm but will be closed on weekends. Libraries open on the day before classes resume.

GENERAL POLICIES

Policy Changes

The University of Lowell reserves the right to change requirements, subjects, courses, regulations and other policies stated in this bulletin without formal notice.

Inclement Weather

Continuing Education and Evening School classes will not be cancelled for reasons of weather. The difficulty of notifying all students and instructors individually in sufficient time makes this policy necessary. The University does reserve the right to cancel classes in any case of emergency.

Special Students

Students who wish to register for a single course in the undergraduate degree programs may do so provided they have the necessary prerequisites. Tuition will be charged at the regular rate, and credit will be awarded for the successful completion of such courses.

Attendance

Students must attend 80 percent of all classes held in their courses. More than three unexplained absences may cause a student to be dropped from the rolls with a grade of "F" in the course. Examinations or other work missed by absence may, at the option of the instructor, be made up or failed.

Audit

Courses may be taken for *Audit only* as a review for courses previously taken and passed. Permission of the Assistant Dean or Assistant Director must be obtained in order to take an audit course.

Federal Benefits

All veterans entitled to educational benefits under Federal law should secure a Certificate of Eligibility from the Veterans Administration. Application forms may be obtained from the Evening School Office or the local V.A. office. All veterans must submit a high school transcript and a transcript of all post-secondary education before registering in any program.

Student Responsibility

To be admitted to, and enrolled in a scheduled class, students must present to the instructor a validated class card which is received from the Continuing Education Business Office upon payment of fees.

The identification card issued by the University must be carried by the student on his person while attending school.

It is the responsibility of the student to become familiar with the scholastic regulations in regard to attendance, scholastic standards, withdrawals, etc. as stated in this bulletin. An administrative assistant is assigned to the Evening School Office from 6:30 to 10:00 p.m. throughout the school year to advise students about these matters.

Students must pay for any breakage or damage of school equipment that they may cause, provided that such breakage or damage does not occur while the student is under the direct supervision of his instructor.

In some instruction the student is required by law to wear safety glasses or other safety devices. The instructor of such classes will inform students of their obligation to obtain and wear the necessary safety protection.

Administrative Dismissal

Administrative dismissal may be invoked when a student fails to comply, after due notice, with an administrative requirement of the University.

Class Schedule

Classes in the Evening School undergraduate degree programs are scheduled from 7:00 to 10:00 p.m. on Monday, Tuesday, Wednesday, Thursday, and Friday evening and (occasionally on Saturday) as listed in the schedule on the inside back cover of this bulletin. Other hours are sometimes scheduled in certain courses, in which case the hours are listed in the schedule of classes published each semester.

Size of Class

Those classes which do not register a minimum of 15 students may be cancelled. The number of enrollments during preliminary registration is an important factor in determining the schedule of courses; thus to ensure the scheduling of desired courses students are urged to participate in the preliminary registration.

Books and Supplies

Students must provide their own books, paper, drawing materials, and other supplies. Required texts and supplies are sold by the University's bookstore at scheduled times in the evening. The bookstore schedule is posted on the Evening School bulletin board in the basement of Cumnock Hall.

REGISTRATION INFORMATION

Preliminary Registration

A preliminary registration process for new applicants and previously enrolled students enables the Evening School to schedule classes more efficiently, and to provide for adequate instruction in courses which would otherwise be over-subscribed. The process also allows the student to stipulate a preferred day and hour for multi-section courses, and expedites the formal registration process which is held at a later date. Since no payment of fees is involved in preliminary registration, **students are alerted that they are not formally registered until all fees have been paid in full during the scheduled formal registration period.**

Scheduled Registration

Students register by completing the necessary forms (a process expedited by participation in preliminary registration), and paying the required fees before commencement of classes. Registration is held on the dates indicated in the calendar (inside front cover). During the registration period the Business Office is open from 6:00 to 8:30 p.m. in addition to regular daytime hours. **A student is not officially registered until tuition and all other fees have been paid,** and the class cards have been validated by the Continuing Education Business Office. These cards are required for admission to class. Students must also obtain an identification card during the registration period.

Late Registration

Late registration is permitted until the end of the second week of classes. A late registration fee of \$10.00 will be assessed in addition to regular tuition charges and other fees. No student will be admitted to a class after the third meeting. **No class changes are accepted after the end of the second week of classes.**

Summer Program

Selected courses are offered during the summer. The subjects offered depend upon student demand and may vary from year to year. For each course passed during the summer, students receive full credit on the same basis as for work done during the fall or spring semesters. Costs and other information are available at the Evening School Office before the start of the summer session.

Program Planning

An administrative assistant is available at the Evening School Office

throughout the school year while classes are in session. Assistance in program planning is also available during the scheduled registration period each semester. **However, students are strongly advised to seek counselling during the school year so that they may participate in preliminary registration.**

Transfer Credit

If a student wishes to request transfer credit he must complete, in duplicate, a form entitled "Request for Transfer Credit". This form must be filed at the student's first registration. It is the student's responsibility to submit an official transcript of grades for work done elsewhere, together with a catalogue or other description of the courses taken. No request for transfer credit will be considered until all the required material has been submitted. Credit will be allowed for work completed at accredited institutions (subject to the limitations listed below) which is deemed equivalent to University of Lowell instruction, and for which the student has received a grade equivalent to a "C" or higher by University of Lowell standards.

Grades of transferred courses, however, will not be computed in a student's cumulative rating at the University of Lowell. Transfer subjects will be recorded with the notation "Cr" which designates that credit only has been granted.

Transfer credit will not be granted in the following instances:

1. For work completed at non-public institutions which are not accredited by the major accrediting associations.
2. For work completed through extension or adult-enrichment programs.
3. For work which was completed more than ten years prior to the date of application for transfer credit to the University of Lowell.
4. For work which was not acceptable to the transfer institution for its own associate or baccalaureate programs.

However, if the student is able to demonstrate his competence in subjects for which transfer credit is denied by passing special departmental examinations or through the CLEP program, credit may be awarded by the University.

The University of Lowell has affirmed its intention to maintain flexibility in the transfer of qualified students of the Commonwealth of Massachusetts. For the implementation of this objective, the University of Lowell has subscribed to the Massachusetts Transfer Compact.

University of Lowell Day School students who wish to transfer to the Evening School must follow University Regulations as noted in the General Academic Rules of the University (Day School). Students with satisfactory academic standing and students who have been placed on warning may petition for intercollegiate transfer to the Evening School.

Day School Classes

Students who are matriculating for associate or baccalaureate degrees in the Evening School of Continuing Education may be permitted to pursue specifically authorized day courses. Such students must secure the written approval of their program coordinators for all projected courses prior to filing an application with the Office of University Admissions. Full notation of all approved courses (including those which have been failed) is made upon the permanent record card of continuing education students, and the grades earned are included in the cumulative grade point average.

Off Campus Study

Individuals who have been admitted to the Evening School may be permitted to apply off-campus courses to their degree programs when they comply with established procedures. Off-campus courses may be taken in accredited institutions only and ordinarily should be taken at baccalaureate colleges or at universities. Permission to pursue off-campus courses in accredited associate degree institutions may be granted only for courses which are to be presented for lower-division requirements of University of Lowell curricula. All off-campus courses must be taken under the regular grading system and may not be taken on a "pass-fail" or "pass-no record" basis. Students must request permission to take off-campus subjects by completion of a petition form and must obtain written approval from their curriculum Coordinator.

TUITION AND FEE INFORMATION

Tuition

Tuition charges are \$26.00 per credit hour for a lecture course, \$26.00 per weekly contact hour for a laboratory course, and \$13.00 per weekly contact hour for audit courses. In September 1980, tuition charges will be increased to \$30.00 per credit/contact hour.

Registration Fee and Insurance Fund

A payment of \$5.00 per semester in addition to tuition and other charges is required of all students for registration and for compulsory insurance. This payment is not refundable.

The compulsory fee, approved by the Board of Trustees of the University of Lowell, provides an accidental medical insurance plan to cover registered students in Continuing Education while on the premises of the University for scheduled instruction, and while engaged in any supervised activity sponsored by Continuing Education. Payment will be made for medical expenses from such accidents up to a maximum of \$1,000. Claim forms can be obtained from the Evening School Office and submitted to the doctor or hospital, if possible, at the time of treatment. Benefits are paid directly to the medical facility.

Late Registration Fee

A late registration fee of \$10.00 is charged any student who registers after the regular registration dates as listed in the calendar on the inside cover of this bulletin. This fee is assessed in addition to usual registration and insurance

fees. This payment is not refundable.

Laboratory Fee

A \$20.00 laboratory fee is charged any student who registers for a laboratory course. This payment is not refundable.

Refunds

Students withdrawing from a class before the first class meeting are entitled to a 100% refund. Students withdrawing from a class after the first meeting but before the second class meeting are entitled to a 50% refund of tuition. No refunds will be made after the second class meeting.

Students desiring refunds must file an application on the form obtainable at the Evening School Office. The registration and insurance fee of \$5.00, and the late registration fee of \$10.00 are not refundable unless the class has been cancelled.

Payment of Bills

A student in debt to the University at the end of any semester or summer session for fees or other charges is not permitted to register again at the University until his or her indebtedness has been discharged. Such a student who has been preregistered shall have his or her registration cancelled without further notice if payment of previous indebtedness has not been made prior to the beginning of classes for the following semester. Grade reports and transcripts of students will not be released unless all indebtedness has been discharged.

ADMISSION AND DEGREE PROGRAM MATRICULATION INFORMATION

General Requirements

Entrance to all undergraduate degree programs offered by the Evening School requires graduation from a recognized high school or equivalent such as a Massachusetts High School Equivalency Certificate. Each student must submit his high school transcript or equivalency certificate prior to matriculation. In addition, students desiring to enter degree programs must have the following qualifications at the time of application:

for Business and Public Service Programs—Two years of mathematics of which one year must be algebra.

for Technology and Science Programs—A minimum of two years of mathematics with one year of algebra and one year of plane geometry.

for the Medical Technology Program—ASCP Certification (C.L.A. or M.L.T.).

for the Nursing Program—Licensure as a registered nurse. It is also recommended, but not required, that applicants have two years of mathematics, including one year of algebra. Students not possessing this background in mathematics should seek guidance before registering for the computer and statistics courses.

Matriculation in a Degree Program

In order to be matriculated in a degree program it is necessary (in addition to satisfying the entrance requirements) for the student to have demonstrated ability to participate in college level courses. Thus, matriculation in a degree program is deferred until the student satisfactorily completes a minimum of 18 credits in required subjects. (One credit is one class hour per week per semester.) A student who has done so must request matriculation to a degree program by completing the necessary form. Further requirements for matriculation in the Medical Technology Program and the Nursing Program are as follows:

Matriculation in the Medical Technology Program

Matriculation is effective upon the satisfactory completion of 18 credits in required subjects with a grade of "C" or better. Students must achieve an overall grade point average of 2.5 prior to admission into the upper division (years 5 to 7) with no grade less than "C" in the prerequisites and Clinical Laboratory Science courses.

To be recommended for graduation, Medical Technology students must satisfactorily complete all Clinical Laboratory Science courses with a grade of "C" or better, and their cumulative grade point average must be at least 2.5.

Matriculation in the Nursing Program

Matriculation is effective upon the satisfactory completion of 18 credits in required subjects with a grade of "C" or better. Students must achieve an overall grade point average of 2.5 by the end of the fourth year of required subjects. These subjects must be completed prior to enrolling in the nursing subjects. These subjects must be completed prior to enrolling in the nursing subjects in years 5 and 6. In order to be recommended for graduation, Nursing students must maintain a cumulative grade point average of 2.5 throughout the remainder of the program.

UNIVERSITY REQUIREMENTS FOR BACCALAUREATE STUDIES

All baccalaureate candidates are required to obtain 2.00 ("C") cumulative averages in their total courses of study, to present a minimum of 120 semester hours of course credits to fulfill the residency requirement of one year of fulltime study, to conform to the general regulations and requirements of the University, to satisfy the regulations and academic standards of the colleges which exercise jurisdiction over the degrees for which they are matriculating, to satisfy the curriculum requirements established by the departments or programs in which they are majoring, and to complete the following core requirements of thirty-three (33) semester credits.

University Core Requirements

1. English Composition Requirement (six (6) semester credits).

All students must pass a sequence of two courses totaling six semester credits in English Composition (normally to be taken during the freshman year).

2. Area Distribution Requirements (twenty-seven (27) semester credits.)

All students must select and pass a minimum of nine courses and twenty-seven

semester credits outside their major departments in three basic areas of the liberal arts and sciences. A minimum of two courses and six semester credits must be presented in **each** of the three areas and an additional three courses and nine semester credits must be presented from **among** the three basic areas. In fulfilling the Area Distribution Requirements, students may not present more than three courses and nine semester credits from the offerings of any one department (except that they may not present more than two courses and six semester credits from the offerings of the English Department) and may not present more than four courses and twelve semester credits in any one distribution area.

AREA I: Behavioral and Social Sciences

Economics, Geography (non-laboratory courses), History, Political Science, Psychology, and Sociology.

AREA II: Fine Arts and the Humanities

Art, English, Languages, Music, and Philosophy

AREA III: Mathematics and the Sciences

Astronomy, Biology, Chemistry, Earth Sciences (Geography laboratory courses, Geology, Meteorology), Mathematics and Physics.

Residency Requirement

In addition to satisfying specific course and achievement requirements, each baccalaureate candidate must complete at least 15 semester credits in regular course work within major departments of the University for each major which is presented for a degree. Each candidate for a baccalaureate degree must also satisfy one of the following residency requirements:

1. Complete not less than 90 semester credits at the University and complete the remainder of the prescribed courses of study at another accredited baccalaureate institution, earning not more than 36 semester credits at that institution.
2. Complete an associate degree under the provisions of the Massachusetts Transfer Compact, in a Massachusetts Community College, earning not more than 60 semester credits, and the remainder in courses of the University, earning not less than 60 semester credits;
3. Complete up to the first two years in an accredited associate institution earning not more than 60 semester credits (with "C" grades or better), and the remaining years in courses of the University, earning not less than 60 semester credits. Individuals transferring from a Massachusetts Community College who have not completed the associate degree may receive recognition only for credits completed with grades of "C" or better; or
4. Complete up to the first three years of a baccalaureate program in an accredited four-year institution, earning not more than 90 semester credits ("C" grades or better), and the remaining courses in the University, earning not less than 36 semester credits.

Except that all candidates for a baccalaureate must present a minimum of 36 semester credits of full-time study in University evening classes, the above cited residency requirements for University study may be satisfied through

other than the attendance of evening classes, for example: established course-equivalency procedures, authorized day courses in the University and authorized courses at other accredited baccalaureate institutions.

Upon approval of the appropriate curriculum Coordinator, the course requirements of 15 credits with the major department and up to 15 credits of the minimum University residency requirements may be satisfied through completion of day courses of the University.

Additional Baccalaureate Degree

A student who has earned a baccalaureate degree at the University of Lowell or at another accredited baccalaureate institution may be admitted to the University to pursue an additional baccalaureate degree which is different from that previously conferred if (1) the major field of the previous degree is clearly distinct from that of the additional degree, (2) the work for the additional degree consists of not less than four semesters of residence, (3) the final 36 credits presented for the additional degree are in addition to and independent of any previous baccalaureate, and (4) a minimum of 15 credits is taken at the University in the major field which is presented for the additional degree. If any of the first three years of credit has been transferred from another institution, the candidate for the additional baccalaureate degree must earn a minimum of 36 semester credits of uninterrupted residence at the University.

UNIVERSITY REQUIREMENTS FOR ASSOCIATE STUDIES

Students must meet all the requirements of the program as noted in the **Bulletin of Undergraduate Studies of the Evening School**. In addition, each student must complete at least 9 semester credits in regular course work with his/her major department and must complete at least 24 semester credits in the Evening School of the University of Lowell.

Additional Associate Degree

A student may pursue an additional associate degree under the same regulations set forth for pursuing an additional baccalaureate degree except that the number of credits required are 24.

GRADING INFORMATION

Grading System

The following qualitative letter grades are employed by the University to characterize the quality of a student's work in a course:

"A"	designates that the work done by the student is superior and is of the highest honors quality;	4
"AB"	designates that the work done by the student is less than superior but is completed with a level of distinction which is higher than the basic honors level;	3.5

"B"	designates that the work done by the student is less than honors quality;	3
"BC"	designates that the work done by the student is less than honors quality but is better than satisfactory;	2.5
"C"	indicates satisfactory work which conforms to the general expectations of the University for baccalaureate study;	2
"CD"	indicates that the work done by the student is less than satisfactory and below graduation standards but is better than the minimum requirement for passing a course;	1.5
"D"	indicates work which meets the minimum requirement for passing a course;	1
"F"	designates course failure.	0

In addition to the above letter grades, the following symbols are also used to designate special enrollment provisions or course statuses and do not affect the student's academic average:

"S"	designates satisfactory completion of a practicum experience course with a grade of "C" or higher;
"U"	indicates unsatisfactory performance in a practicum experience course with a final course grade of less than "C";
"I"	indicates a course which has not been completed;
"W"	designates official withdrawal from a course within the established deadline.
"X"	designates student withdrawal after the established deadline for administratively approved reasons of an emergency or medical nature;
"Y"	designates administrative dismissal for other than academic reasons;
"AU"	designates that the student has registered for a course on an "audit" basis and has maintained an attendance record throughout the semester which is sufficient to warrant an official recognition of his course attendance.

Withdrawal

"W" is not an academic grade but a symbol designating **official** withdrawal from a course within the established deadline of the eighth (8) week of class of a semester. Official withdrawal is accomplished by filing a "Withdrawal Form" with the Evening School Office. A notation of "W" cannot be given for unofficial withdrawal from a course, or for unofficial withdrawal from the University. Accordingly, a student who registers for a course and is carried on an official class roster after the eighth week of a semester must be graded in terms of the completion of the instructor's total course requirements even though the student did not attend any class meeting, or unofficially left before the eighth week of the semester. A student who wishes to withdraw from a course after the deadline of the eighth week must submit a petition to the Evening

School Office. An "X" will be given only when it can be demonstrated that **extended** illness or a critical personal emergency of an **extended** nature prevented the student from complying with official withdrawal procedures. **Students receiving benefits from the Veterans Administration are not eligible for retroactive withdrawal from courses** since the University is required to make official, and immediately report, any change of enrollment status for such students to the Veterans Administration.

Incomplete

An Incomplete ("I") is given at the discretion of the instructor; students should not take it for granted that they will receive an Incomplete without first consulting with their instructor. However, responsibility for completing all outstanding work rests entirely with the student. The Incomplete notation carries with it a reserve letter grade; if all outstanding work is not acceptably made up and submitted within a four-week period following the final examination, the "I" will automatically become whatever the instructor has designated as this reserve grade. If the work is satisfactorily completed within the designated time, the instructor will replace the "I" notation (and its reserve grade) with an appropriate letter grade. Outstanding work may be made up after the four week period, but arrangements for this make-up must be completed within the original four-week period and permission of the instructor must be obtained for the extension of time.

Repeated Course Work

Students must repeat and pass all **required** courses which they have failed. Any failed course which is a prerequisite for another must be repeated and passed before the student can take the advanced course.

Students may repeat a limited number of courses in which they received a grade of "F" and have the repeated grade substituted for the original grade in the computation of the cumulative grade-point average. Non-probationary students must repeat courses within 36 semester hours following their course failures. Although probationary students may not invoke the grade-substitution provision during their periods of probation, they may invoke the grade-substitution process upon removal from probation. Students entering as freshmen or transferring with less than 60 semester credits are permitted a maximum of 10 credits of course repetition for grade substitution; students transferring with 60 or more semester credits are permitted a maximum of 7 credits of course repetition for grade substitution. For courses repeated in excess of these limitations, **both grades** will be used in determining the grade-point average. Students must designate by petition which courses are being repeated for the purpose of grade substitution **before** re-enrolling.

Prior to an initial determination of academic progress a student may not repeat courses for grade substitution.

Remedial Courses

Any course in a sequence of courses which is at a lower level than the required courses in the program will be considered a remedial course and is not acceptable as an elective in the program. Grades earned for these courses will not be calculated in the student's grade point average, e.g., 42.100; 90.010; 90.111.

ACADEMIC STANDING

Grade-Point Requirements

Each student is subject to the following grade-point requirements for the specified numbers of completed course hours. These grade-point averages are minimum University requirements; individual colleges or departments may establish higher standards.

Course Hours Completed*	Grade-Point Averages for Satisfactory Standing +	Grade-Point Averages for Academic Warning +	Grade-Point Averages for Academic Suspension +
12-30	1.500	1.400-1.499	1.399 or below
31-45	1.600	1.500-1.599	1.499 or below
46-60	1.700	1.600-1.699	1.599 or below
61-75	1.800	1.700-1.799	1.699 or below
76-90	1.900	1.800-1.899	1.799 or below
91-graduation	2.000	1.900-1.999	1.899 or below

*Included in "Course Hours Completed" are all course credits which have been granted (including credits awarded through transfer and challenge by examination, course credits which have been awarded with qualitative letter grades) and all hours of course work which have been failed with the qualitative letter grade of "F".

+ Specified "Grade-Point Averages" are computed solely on the basis of those courses completed at the University of Lowell or through University auspices within policies governing authorized off-campus study which have been qualitatively evaluated with the following letter grades: "A", "AB", "B", "BC", "C", "CD", "D", and "F".

A student who has been placed on Academic Warning must reach Satisfactory Standing upon the completion of 15 additional hours of course work or be suspended from the University.

Students who have achieved junior or senior class standing by January 1, 1976 are exempt from the University grade-point averages through the end of the Spring Semester 1980.

All students who are exempted from the grade-point requirements of the University for the above specified periods are subject to the following grade-point requirements.

Course Hours Completed*	Grade-Point Averages for Satisfactory Standing +	Grade-Point Averages for Academic Warning +	Grade-Point Averages for Academic Suspension +
31-45	1.45	1.35-1.44	1.34 or below
46-60	1.50	1.40-1.49	1.39 or below
61-75	1.55	1.45-1.54	1.44 or below
76-90	1.60	1.50-1.59	1.49 or below
91-105	1.65	1.55-1.64	1.54 or below
106-	1.70	1.60-1.69	1.59 or below

*Included in "Course Hours Completed" are all course credits which have been granted (including credits awarded through transfer and challenge by examination, course credits which have been awarded with qualitative let-

ter grades) and all hours of course work which have been failed with the qualitative letter grade of "F".

+ Specified "Grade-Point Averages" are computed solely on the basis of qualitatively graded courses which have been completed at Lowell State College, Lowell Technological Institute, and the University of Lowell.

Academic Probation

A student who has been suspended from the University as a matriculating student in the Evening School is entitled to apply to the Office of Continuing Education for readmission as a probationary student in accordance with procedures enumerated under the admission policy heading Probationary Readmission. Students who are readmitted on probation will receive a letter from the Academic Standards Committee of the Evening School* which specifies their probationary courses and the academic average which they must achieve during their designated probationary period in order to achieve satisfactory academic standing.

A student who achieves the required academic average during his or her probation is automatically reinstated as a student in satisfactory academic standing. A student whose academic average falls below the required average for his or her designated probationary period by no more than 0.10 may be granted an extension of the probationary period which will permit the completion of an additional 15 credits. Such extension of probation, if granted, will be made by the Academic Standards Committee of the Evening School* during the period between semesters. Students who are granted such extensions will be notified in writing prior to the beginning of classes for the following semester that they have been granted an additional probationary period to achieve satisfactory academic standing. Students who fail to achieve satisfactory academic standing and are not granted extensions of their probations by the Academic Standards Committee of the Evening School* and students who are granted such extensions and fail to achieve satisfactory academic standing by the end of the designated period are permanently dismissed from the University and are subsequently barred from attending both day and evening courses.

Students who have been readmitted on probation may not invoke University regulations which govern course repetition for the purpose of deleting course grades from cumulative averages. + Nor may they withdraw from any course unless they withdraw from the University with permission of the Director of Continuing Education for reasons of an emergency or medical nature. A probationary student who withdraws from any course without authorization of the Director of Continuing Education cannot by definition satisfy the conditions of his or her probation and will be permanently dismissed from the University at the end of the current semester of enrollment.

Probationary students who receive course evaluations of "I" (incomplete) and who fail to make-up their work under the regulations of an "I" grade are advised that they may not qualify for extension of their probation, may not register for nor attend University courses (including summer courses), and may not receive authorization to pursue off-campus studies until such time as a final determination of their status has been made.

Accordingly, probationary students are advised that they should not delay completion of course work until the make-up deadline which has been established for students in satisfactory academic standing unless they wish to postpone resumption of their studies. Students who have received permission of the Director of Continuing Education to extend their make-up period should understand that such authorized extension does not waive the requirement for a final determination of academic standing which is based upon grades for all probationary courses.

*Students seeking probationary readmission to Continuing Education programs which are under the direct academic control of University colleges and/or departments are reviewed by appropriate college committees rather than by the Academic Standards Committee of the Evening School.

+ Following attainment of satisfactory academic standing and removal from probation, a student who has failed a course during the two semesters preceding suspension and has repeated and passed such a course during his or her probationary period may retroactively invoke the provision which permits deletion of the course failure from the cumulative grade-point average.

Probationary Readmission

A student who has been suspended from the University as a matriculating student in the Evening School is entitled to apply for readmission as a probationary student but may not initiate his or her probationary studies before an absence from the University of one semester. Application for such readmission to all programs of the Evening School is made through the Office of Continuing Education in accordance with prescribed procedures and must be received by **April 1** for readmission decision during the Spring Semester and by **November 1** for readmission decision during the Fall Semester. Petitions which have been received by the filing deadline of November 1 will be reviewed by the Standards Committee of the Evening School* during the Fall Semester and readmitted students will be permitted to initiate their probationary studies at the beginning of the Spring Semester. Similarly, petitions which have been received by the filing deadline of April 1 will be reviewed by the Academic Standards Committee of the Evening School* during the Spring Semester and readmitted students will be permitted to initiate their probationary studies at the beginning of the Fall Semester. The Academic Standards Committee of the Evening School** may authorize the initiation of probationary studies during the summer school if such a request has been made by the applicant for probation.

Upon receipt of an application, the Office of Continuing Education will forward all readmission papers to the Academic Standards Committee of the Evening School.

+ + After securing recommendations from appropriate program coordinators and studying the previous academic record of the student, the Academic Standards Committee will lay down the requirements which the student must satisfy as a condition for his or her probation (specific courses to be taken, conference schedules with program coordinators, and any other special or general academic condition which may be construed as necessary for the student's suc-

cessful completion of his or her probationary studies.)

In determining such requirements for probation, the Academic Standards Committee shall prescribe a sufficient number of courses (12 to 18 credits) which shall make the achievement of satisfactory academic standing reasonably possible during the designated probationary period. For complete information concerning probationary requirement, cf. "Academic Probation" under the section heading for **Undergraduate Academic Policies: Academic Standing**.

****Students seeking probationary readmission to Continuing Education programs which are under the direct control of University colleges and/or departments are reviewed by appropriate college committees rather than by the Academic Standards Committee of the Evening School.**

+ + Since program transfer is permitted only for students in satisfactory standing, students who have been suspended for inadequate scholarship may apply for readmission as probationary students only to the program in which they were previously enrolled.

WARNING—Students who attend another institution while on suspension from the University must petition to have their courses accepted for transfer credit only after successful completion of the probationary period. Inasmuch as these courses would have been taken without permission of the curriculum coordinator, it is possible that the petition could be denied.

Determination of Undergraduate Class Standing

Freshman Standing	0-29 semester credits
Sophomore Standing	30-59 semester credits
Junior Standing	60-89 semester credits
Senior Standing	90 or more

GRADUATION INFORMATION

Graduation Interview

It is the responsibility of each student to arrange for graduation interview at the Office of the Evening School early in the first semester of the school year in which the student plans to qualify for a degree. A subsequent interview may be required early in the second semester.

Commencement Fee

A fee of \$25.00 is required of graduating students, and is payable on or before registration for the final semester in which the student qualifies for a degree. The fee covers such expenses as diploma, rental of cap and gown, invitations and other printing, and any other expenses approved or directed by the President of the University.

University Honors

The University awards degrees with three levels of distinction upon those graduating students who have exhibited exceptional scholastic records. To be eligible for honor at graduation a student must have achieved a minimum grade-point average of 3.00 for all courses completed at the University (or through its auspices under regulations which govern authorized off-campus course work), and must have earned a minimum of 60 semester credits at the University (or through its auspices under regulations which govern authorized off-campus course work) as upperclass students, or a minimum of 30 semester credits for the Associate Degree. Additionally, each honor student must qualify for the percentile distribution cited below as applied by each college to its total number of graduating students.

Summa Cum Laude	99th through the 98th percentiles
Magna Cum Laude	87th through the 90th percentiles
Cum Laude	89th through the 75th percentiles

Each college will calculate and publish each fall the distribution of grade-point achieved by graduates in the three preceeding classes. Based upon this distribution, students must have grade-points at graduation in the cited percentile ranges.

Associate degree and baccalaureate degree students in the senior year of their respective Evening School programs of study are eligible for membership in the Alumni Association. They may become active members by filing application with the Association, and shall be entitled thereby to vote and hold office in the Association.

ENGINEERING TECHNOLOGY CURRICULA

Engineering Technology is that part of the technological field which requires the application of scientific and engineering knowledge and methods combined with technical skills in support of engineering activities.

The engineering technology curricula outlined in this catalog are planned sequences of college-level courses leading to an associate or baccalaureate degree designed to prepare students to work in the field of engineering technology. The graduate of an associate degree is generally known as an engineering technician and the graduate of a baccalaureate program is generally known as an engineering technologist.

The Engineering Technology Programs are supervised by a Program Faculty composed of full-time and part-time faculty. The coordinator of each Program Faculty, together with the Department Chairman, sits on the Engineering College Council.

COURSE EQUIVALENCY PROCEDURES

The Evening School is in full accord with the principle of affording an opportunity for those who have college-level competence in any subject, regardless of how or where they have acquired it, to demonstrate their competence, and to have it recognized by the award of course equivalency credits toward the fulfillment of degree requirements. Students may apply for course equivalency credits up to a maximum of 30 credits; however, the total of equivalency credits and transfer credits may not exceed 90 credits toward the baccalaureate degree.

Course equivalency credits are awarded through successful completion of College Level Equivalency Program (CLEP) examinations or departmental examinations. Departmental examinations will not be given if a corresponding CLEP examination is available.

Students interested in taking CLEP subject examinations must complete the "Request for Credit by Examination" form and obtain written approval from the program coordinator before taking the examination.

Students interested in taking departmental examinations must first arrange an interview at which time they must present evidence that they possess sufficient competency to warrant a departmental examination. (Departments reserve the right to refuse the granting of credit by examination for those courses which are presented by a student for his major.) When written permission is given to a student to take a departmental examination, the conditions of the examination will be set forth. A \$25.00 examination fee must be paid before taking the examination.

Students may not request course equivalency credits for courses which they have audited, failed, or withdrawn from; nor for a course in which a substantial portion of the material has been covered by another course, and for which the University has granted the student credit; nor for a course which is lower in sequence than a course in which they received University credit.

General Examinations of CLEP may be presented for credit if scores of 500 or better have been obtained, however, these examinations are only applicable to students prior to attending college.

It should be noted that general examination credits may not be applied to a student's degree requirements when a general examination is cognate with the student's academic major.

SUGGESTED SEQUENCE FOR ASSOCIATE OF SCIENCE DEGREE

INFORMATION SYSTEMS

FIRST YEAR

First Semester (Sept.)		Second Semester (Jan.)	
Subject No.	Credits	Subject No.	Credits
92.264	Concepts of Computing3	92.263	Fortran Programming3
90.112	Mathematics B3	90.119	Mathematics C3
42.101	College Writing3	42.102	College Writing & Literature3
<hr/>		<hr/>	
9		9	

SECOND YEAR

67.201	Accounting Principles I3	67.202	Accounting Principles II . . .3
42.111	Technical and Business Writing3	69.201	Principles of Management . .3
92.365	Cobol Programming I3	92.368	Cobol Programming II3
<hr/>		<hr/>	
9		9	

THIRD YEAR

92.367	Assembler Language Prog. I3	92.462	Advanced Programming Systems3
67.311	Managerial Accounting3	69.331	Business Finance3
68.201	Economics I3	68.202	Economics II3
<hr/>		<hr/>	
9		9	

FOURTH YEAR

90.241	Statistics for Business I3	90.242	Statistics for Business II . . .3
.....	Area I or II Elective3	69.371	Operations Management I . .3
.....	Elective3	Elective3
<hr/>		<hr/>	
9		9	

Recommended electives for Information Systems concentration:
92.461, 92.463, 92.464, 92.468, 92.471

It is recommended that other free electives be selected from the accounting, management, economics and banking areas.

BACHELOR OF SCIENCE

MANAGEMENT

BACHELOR OF SCIENCE DEGREE REQUIREMENTS - 126 CREDITS

Required Courses —

Arts and Sciences

48 credits (each subject — 3 credits)

- *42.101 College Writing
- *42.102 College Writing and Literature
- *42.111 Technical and Business Writing
- *47.101 General Psychology
- 48.101 Introduction to Sociology
- *90.112 Mathematics B
- *90.119 Mathematics C
- *90.251 Business Computer Apps. I
- *90.252 Business Computer Apps. II
- *68.201 Economics I
- *68.202 Economics II
- *90.241 Statistics for Business I
- *90.242 Statistics for Business II
- 68.307 Government and Business
- 68.332 Money and Banking
- 68.312 Managerial Economics

Required Electives — 48 credits

Behavioral and Social Science

Electives (Area I)

Fine Arts and Humanities

Electives (Area II)

Science Electives

Free Electives

Required Courses — Business

30 credits (each subject — 3 credits)

- *67.201 Accounting Principles I
- *67.202 Accounting Principles II
- *67.311 Managerial Accounting
- 67.362 Business Law I
- *69.201 Principles of Management
- *69.331 Business Finance
- 69.321 Marketing Principles
- 69.451 Personnel Management
- *69.371 Operations Management I
- 69.498 Business Policy I

BACHELOR OF SCIENCE IN ENGINEERING TECHNOLOGY

CIVIL ENGINEERING TECHNOLOGY

Years 1-4—Leading to the Degree of Associate of Science in Engineering Technology

FIRST YEAR

First Semester (Sept.)		Second Semester (Jan.)	
Subject No.	Credits	Subject No.	Credits
90.113	Intro. to Analysis I3	90.115	Intro. to Analysis II3
23.111	Engineering Drawing I3	23.112	Engineering Drawing II3
42.101	College Writing3	42.102	College Writing and Literature3
<hr/>		<hr/>	
9		9	

SECOND YEAR

15.123	Surveying I4	15.124	Surveying II4
90.131	Calculus I3	90.132	Calculus II3
95.141	Physics I3	99.142	Physics II3
<hr/>		<hr/>	
10		10	

THIRD YEAR

15.237	Statics3	15.239	Strength of Materials (CE) . .3
15.255	Environmental Engineering I3	15.243	Construction Materials3
15.257	Highway Elements3	42.112	Technical & Scientific Writing3
<hr/>		<hr/>	
9		9	

FOURTH YEAR

15.251	Structural Analysis I3	15.242	Steel Design I3
15.253	Reinforced Concrete I3	15.246	Intro. to Hydraulics3
15.238	Dynamics (CE)3	15.254	Soil Mechanics I3
<hr/>		<hr/>	
9		9	

CIVIL ENGINEERING TECHNOLOGY

Years 5-8—Leading to the Degree of Bachelor of Science in Engineering Technology

FIFTH YEAR

First Semester (Sept.)			Second Semester (Jan.)		
Subject No.		Credits	Subject No.		Credits
15.352	Structural Analysis II	3	15.356	Environmental Engineering II	3
15.391	Reinforced Concrete II	3	15.383	Steel Design II	3
84.121	Chemistry	3	84.122	Chemistry	3
		9			9

SIXTH YEAR

15.392	Soil Mechanics II	3	15.394	Soil Mechanics Lab	3
92.263	Fortran Programming	3	Area II Elective	3
90.231	Calculus III	3	90.232	Calculus IV	3
		9			9

SEVENTH YEAR

68.201	Economics I	3	68.202	Economics II	3
17.127	Electrical Fundamentals	3	99.143	Physics III	3
.....	Area I Elective	3	Technical Elective	3

EIGHTH YEAR

15.461	Advanced Surveying	3	15.486	Transportation Elements	3
20.414	Industrial Economics Mgt.	3	Area I or II Elective	3
.....	Technical Elective	3	Technical Elective	3
		9			9

Technical Electives may be selected from the Engineering Technology, Science, and Math areas.

Technical Electives from other areas must be approved by the Program Coordinator.

BACHELOR OF SCIENCE IN ENGINEERING TECHNOLOGY

ELECTRONIC ENGINEERING TECHNOLOGY

Years 1-4—Leading to the Degree of Associate of Science in Engineering Technology

FIRST YEAR

First Semester (Sept.)		Second Semester (Jan.)	
Subject No.	Credits	Subject No.	Credits
90.113	Intro. to Analysis I3	90.115	Intro. to Analysis II3
92.263	Fortran Programming3	95.141	Physics I3
42.101	College Writing3	42.102	College Writing and Literature3
<hr/> 9		<hr/> 9	

SECOND YEAR

17.223	Electric Circuits I3	17.224	Electric Circuits II3

99.142	Physics II3	42.112	Technical & Scientific Writing3
<hr/> 9		<hr/> 9	

THIRD YEAR

17.225	Electric Circuits III3	17.240	Electromechanics3
17.237	Electronics Lab3	17.362	Electronics I3
90.231	Calculus III3	90.232	Calculus IV3
<hr/> 9		<hr/> 9	

FOURTH YEAR

17.241	Energy Conversion3	17.350	Control Systems I3
17.363	Electronics II3	17.364	Electronics III3
17.359	Electronics Lab II3	17.360	Electronics Lab III3
<hr/> 9		<hr/> 9	

Students enrolling in this program should purchase an electronic calculator capable of handling logarithmic and trigonometric functions. The use of the calculator will be an integral part of courses 17.223 and 17.224 where proficiency will be developed. Competency in the use of the calculator will be assumed in all subsequent EE courses.

Students terminating with the Associate in Engineering Technology Degree may replace 90.231 and 90.232 with approved technical electives.

All electives shall be chosen after conference with the Program Coordinator and MUST be approved by him. If electives are not properly approved, it is possible they will not be credited toward the degree requirement.

ELECTRONIC ENGINEERING TECHNOLOGY

Years 5-8—Leading to the Degree of Bachelor of Science in Engineering Technology

FIFTH YEAR

First Semester (Sept.)			Second Semester (Jan.)		
Subject No.		Credits	Subject No.		Credits
17.361	Project Laboratory A	3	84.121	Chemistry	3

Technical Electives may be chosen from business, computer, engineering technology or technology programs.

BACHELOR OF LIBERAL ARTS

Liberal Arts

The Bachelor of Liberal Arts degree requires a minimum of 120 credits as follows:

6 cr.	English Composition
27 cr.	Area Distribution (see University Requirements for Baccalaureate Studies)
36-45 cr.	Major Concentration
18-24 cr.	Optional minor
Remainder cr.	Elective courses

Major Concentration

At present a student may select a concentration in Social Sciences and the Human Services.

Other concentrations may be offered at a later date.

Students must maintain a 2.20 cumulative average in the area of concentration and must select at least 15 credit hours in 300 level courses or higher.

Minor (optional)

A student may select a minor (18 to 24 credits) in one of the following areas:

Humanities

Economics

Computer Science (not to include 90.251, 90.252, 92.209, 92.264)

Mathematics (no course less than Calculus I with 6 credits in 300 level courser or higher).

Electives

Electives may be chosen from: Economics, Chemistry, Science, Mathematics, Computer Science, Clinical Laboratory Science, Behavioral and Social Science, Fine Arts and Humanities. In addition the following courses may also be taken: Accounting 67.201 and 67.202 and Management 69.201.

ACCOUNTING

67.201 ACCOUNTING PRINCIPLES I

Presents a comprehensive and detailed exposure to basic accounting theory. Beginning with the accounting equation, the student is introduced to the accounting cycle, preparation of the Statement of Financial Position and the Income Statement, and accounting for the assets of a firm. One session per week, 3 credits.

67.202 ACCOUNTING PRINCIPLES II

Emphasizes the accounting for corporations, treatment of stockholders equity, earnings and dividends. Examines the Statement of Changes in Financial Position, cash flow causes and effects, and financial statement analysis. One session per week, 3 credits. Prerequisite: 67.201.

67.301 INTERMEDIATE ACCOUNTING I

This course examines the generally accepted accounting principles relating to the preparation of financial statements. The student will study in depth the valuation and disclosure problems associated with the assets of the firm. One session per week, 3 credits. Prerequisite: 67.202.

67.302 INTERMEDIATE ACCOUNTING II

This course continues the in-depth study of the valuation and disclosure problems associated with corporate liabilities and stockholders equity. Emphasis is placed on the opinions of the Accounting Principles Board and Financial Accounting Standard Board. One session per week, 3 credits. Prerequisite: 67.301.

67.311 MANAGERIAL ACCOUNTING

An in-depth examination of the use of accounting systems for managerial decision-making. Budgeting, forecasting, and cost accumulations systems which relate to the manufacturing firm will be studied. One session per week, 3 credits. Prerequisite: 67.202 (For non-accounting majors.)

67.362 BUSINESS LAW I

Principles of commercial law encompassing a study of contracts, agency, employment, commercial paper and sales including the Uniform Commercial Code. One session per week, 3 credits.

67.363 BUSINESS LAW II

The analysis of the legal principles underlying real and personal property, corporations, partnerships, trusts and estates. One session per week, 3 credits.

67.401 ADVANCED FINANCIAL ACCOUNTING I

This course explores theoretical and practical problems in accounting for large, multicorporation business entities. Consolidation, mergers, and home office/branch accounting receive in-depth study. One session per week, 3 credits. Prerequisite: 67.302.

67.402 ADVANCED FINANCIAL ACCOUNTING II

This course offers a comprehensive study of partnership accounting, accounting for installment and consignment sales, and also includes an introduction to accounting for non-profit organizations (government, educational units and hospitals). One session per week, 3 credits. Prerequisite: 67.401.

67.411 COST ACCOUNTING I

An examination of the manufacturing function from the view of the cost accountant. Managerial control of the elements of product costs will be studied with an emphasis on cost accumulation systems both historical and estimated. One session per week, 3 credits. Prerequisite: 67.202.

67.412 COST ACCOUNTING II

Topics covered will include standard (estimated) costs, variance analysis, profit planning, cost-volume-profit analysis, and relevant cost analysis for problem solving. One session per week, 3 credits. Prerequisite: 67.411.

67.421 AUDITING I

An examination of purposes of financial auditing and operations auditing. The following topics will be examined in depth: auditing standards, professional ethics, legal responsibilities, internal control, audit evidence, financial statements disclosures, audit reports, management advisory services, and internal auditing. One session per week, 3 credits. Prerequisite: 67.302.

67.422 AUDITING II

An examination of audit procedures as they relate to the various audit segments: i.e., cash, fixed assets, owners equity, etc. This will be implemented via the use of text material and a comprehensive audit case. Statistical sampling will be covered in depth via the use of text material and cases when available. One session per week, 3 credits. Prerequisite: 67.421.

67.431 FEDERAL INCOME TAXES

This course deals with the basic rules and regulations of the Internal Revenue Code as it affects the individual and the corporation. An understanding of the code is developed through lectures, assigned readings, research, and the solution of a wide variety of problems. One session per week, 3 credits. Prerequisite: 67.202.

ECONOMICS

68.201 ECONOMICS I

A study of the principles governing the production and exchange of goods and services. One session per week, 3 credits.

68.202 ECONOMICS II

A study of the principles governing the level of national income and employment. Examination of the commercial banking system, monetary and fiscal policy, the international economy, and alternative economic systems. One session, per week, 3 credits.

68.301 CURRENT ECONOMIC PROBLEMS

Selected problems which confront the contemporary American economy. One session per week, 3 credits. Prerequisites: 68.202 or 68.201.

68.307 GOVERNMENT AND BUSINESS

An examination of the various governmental controls over business in the American economy. One session per week, 3 credits. Prerequisites: 68.201 or 68.202.

68.312 MANAGERIAL ECONOMICS

An economic approach to management decisions. This subject draws upon economic analysis to help formulate policy in such matters as capital budgeting, multiple product decisions, demand analysis and competitive action. One session per week, 3 credits. Prerequisites: 68.201, 68.202, 90.242.

68.332 MONEY AND BANKING

Evolution of money and credit and their role in the economy. Monetary policy and the Federal Reserve System. Structure and function of the commercial banking system and the role of other

financial institutions. One session per week, 3 credits. Prerequisites: 68.201, 68.202.

BANKING

69.101 PRINCIPLES OF BANK OPERATIONS

Introduction to fundamentals of bank functions. A broad overview of banking and commercial bank operations. One session per week, 3 credits.

69.102 BANK MANAGEMENT

The study of principles of bank management. Emphasis is placed on the application of principles to professional practice of banking. One session per week, 3 credits.

69.103 CREDIT ADMINISTRATION

Credit management dealing with principles of lending, credit investigation and analysis, and credit granting techniques. One session per week, 3 credits.

69.104 ANALYSIS OF FINANCIAL STATEMENTS

In-depth study of financial statements to determine risk in lending and investing practices. One session per week, 3 credits.

69.105 INSTALLMENT CREDIT

A special area of credit management, installment lending, with appropriate study of character, capacity, capital and collateral. One session per week, 3 credits.

69.106 HOME MORTGAGE LENDING

Principles of bank mortgage loan portfolio management, with emphasis on residential mortgages. Study of the mortgage market, the development of the mortgage portfolio, the fundamentals of mortgages, and the processing and servicing of mortgages. One session per week, 3 credits.

69.107 BANK INVESTMENTS

Specialized study of the investment problems of banking institutions with attention to the unique liquidity and liability features of the banking business. One session per week, 3 credits.

69.108 TRUST FUNCTIONS AND SERVICES

The study of the fiduciary role of banks, including trust department operations in administration, investments and estate planning. One session per week, 3 credits.

69.109 BANK PUBLIC RELATIONS AND MARKETING

A study of the public relations and marketing aspects of banking as they would apply to relations with customers, the community, and others. One session per week, 3 credits.

69.110 SAVING AND TIME DEPOSIT BANKING

A fundamental study of the historical development and economic function of savings process. One session per week, 3 credits.

MANAGEMENT

69.201 PRINCIPLES OF MANAGEMENT

Introduction to the principles of management, including the functions of planning, directing, organizing, and control in relation to business. One session per week, 3 credits.

69.321 MARKETING PRINCIPLES

Product planning, distribution, promotion and pricing studied in the context of consumer behavior,

governmental constraints and the structure of business institutions. One session per week, 3 credits. Prerequisite: 68.201.

69.331 BUSINESS FINANCE

Principles of financial management, including working and fixed capital sources of funds, financial statements, budgeting and capitalization. One session per week, 3 credits. Prerequisites: 67.202, 68.201, 68.202.

69.353 ORGANIZATIONAL BEHAVIOR

Application of concepts from the behavioral sciences to individual and group activity in organizations. Use of behavioral concepts to introduce and implement organizational change. One session per week, 3 credits. Prerequisites: 47.101, 48.101.

69.371 OPERATIONS MANAGEMENT I

Principles of production/operations management. Nature and function of production systems; operation planning and control; and plant layout; materials handling; inventory and quality control. One session per week, 3 credits. Prerequisite: 90.242.

69.372 OPERATIONS MANAGEMENT II

Cases on the application of principles from 69.371 to problems involving continuous, intermittent and job lot production systems for both small and large firms. One session per week, 3 credits. Prerequisite: 69.371.

69.410 CURRENT MANAGEMENT PROBLEMS IN BUSINESS AND INDUSTRY I

Special problems of management in working with personnel of minority groups, blacks, women, ethnic groups and others. Extensive use is made of case studies, group projects and field studies. One session per week, 3 credits.

69.411 CURRENT MANAGEMENT PROBLEMS IN BUSINESS AND INDUSTRY II

Advance section to 69.410. Complex problems of job boredom, worker alienation and corporate social responsibility. Solution to these problems and problems in 69.410 will be given in workshop setting. Current relevant case studies with individualized solutions. One session per week, 3 credits. Prerequisite: 69.410.

69.412 SMALL BUSINESS MANAGEMENT SEMINAR

A course for advanced students to study peculiar problems of small business in operations, marketing, accounting, finance and personnel, with emphasis on contemporary problems, through case problems and readings. Open to students with 72 credits toward the B.S. degree or permission of Program Coordinator. One session per week, 3 credits.

69.413 AFFIRMATIVE ACTION — A MYTH OR A MUST

A general overview of the mandatory governmental requirements toward providing jobs for women, blacks, and handicapped. Discussions will encompass the actual legal requirements for developing Affirmative Action Programs and company and union attitudes. Actual case studies will be utilized. One session per week, 3 credits.

69.414 BUSINESS SYSTEMS AND PROCEDURES

A study of techniques for improved managerial controls and reduction of operating costs through improved systems. Topics covered include increased profits through improved systems, records management, information retrieval, and long range planning for business. One session per week, 3 credits. Prerequisite: 69.201.

69.415 AFFIRMATIVE ACTION — COMPANY STRUCTURE

A general overview of the major problems which will arise in the implementation of an Affirmative Action program within a company. The object is to point out the area of difficulty. One session per week, 3 credits.

69.416 COLLECTIVE BARGAINING AGREEMENT

The nature and content of current collective bargaining agreements. Included will be the collective bargaining process including negotiations mediation and arbitration. Case studies in labor management relations involving the entire labor agreement and relationship. One session per week, 3 credits. Prerequisite: 69.452.

69.417 REAL ESTATE

The study of evaluation, legal, financial and regulatory aspects of real estate management. One session per week, 3 credits. Prerequisite: 67.362.

69.421 PURCHASING AND MATERIALS MANAGEMENT

Purchasing procedures, inventory control, quality control, source selection, forward buying and speculation for the production enterprise. One session per week, 3 credits. Prerequisite: 69.321 or permission of instructor.

69.426 SALES MANAGEMENT

Management of the personal selling function. Principles of sales force organization, selection, training, compensation, supervision and motivation are explored via appropriate cases. One session per week, 3 credits. Prerequisite: 69.321.

69.434 INVESTMENT MANAGEMENT

Principles of investment; security analysis, portfolio management, market analysis. One session per week, 3 credits. Prerequisite: 69.331.

69.451 PERSONNEL MANAGEMENT

Recruitment, selection and training of the work force. Wage and salary administration, employee health and safety, welfare and education. One session per week, 3 credits. Prerequisite: 69.201.

69.452 INDUSTRIAL RELATIONS

Human interaction and group behavior in organized industrial settings. Union-management relations, grievance procedures, collective bargaining, and arbitration. One session per week, 3 credits. Prerequisite: 69.451.

69.463 MANAGEMENT INFORMATION SYSTEMS I

Analysis and evaluation of third generation integrated software systems including hardware for requirements, routine and demand reports, architectural evaluation for integrated business function control and the data base design. One session per week, 3 credits.

69.464 MANAGEMENT INFORMATION SYSTEMS II

Automated decision-making models, systems user consideration, the economics of MIS, detailed case studies of large scale MIS including effects on management organization, personnel and data management. One session per week, 3 credits. Prerequisite: 69.463.

69.481 RISK MANAGEMENT AND INSURANCE

Analysis of pure risks of economic loss and evaluation of various methods of dealing with risk. Development and implementation of risk management programs for the business firm. One session per week, 3 credits.

69.498 BUSINESS POLICY

An integration of knowledge in the various functional areas of management toward solution of problems affecting the character and success of the total enterprise. Corporate strategy and its implementation via appropriate policies. One session per week, 3 credits. Prerequisite: senior status.

CHEMISTRY

84.111 GENERAL CHEMISTRY I

A survey of the principles of inorganic chemistry; the structure of matter, the quantitative aspects of chemical reactions, solution chemistry including acid-base chemistry and ionic equilibria. The laboratory work provides practical demonstrations of the theories covered in the lecture portion of the course. Two sessions per week. 4 credits.

84.112 GENERAL CHEMISTRY II

A survey of the basic principles of organic chemistry and biochemistry, with the major emphasis on biochemistry. Carbohydrate, lipid and protein metabolism emphasized. The laboratory work provides practical demonstrations of the theories covered in the lecture portion of the course. Two sessions per week. 4 credits. Prerequisite: 84.111.

84.121 CHEMISTRY I

Class and demonstration. An introduction to the basic concepts of chemistry. Topics include chemical calculations, atomic structures, the periodic table, basic bonding theory, solutions, liquids, gases. One session per week. 3 credits.

84.122 CHEMISTRY II

Class and demonstration. A continuation of 84.121. Topics include thermodynamics, kinetics, acids and bases, introduction to organic chemistry, chemical equilibrium, precipitation reactions, electrochemistry. One session per week. 3 credits. Prerequisite: 84.121.

84.223 ORGANIC CHEMISTRY IB

Discussion of structure, classification by functionality, nomenclature synthesis, reaction mechanisms, and industrial and technological applications of organic compounds. One session per week. 3 credits. Prerequisite: 84.122. Corequisite: 86.231 or permission of instructor.

84.224 ORGANIC CHEMISTRY IIB

A continuation of first semester subject 84.223. One session per week. 3 credits. Prerequisite: 84.223. Corequisite: 86.232 or permission of instructor.

84.314 ANALYTICAL CHEMISTRY II

The course will introduce the student to modern instrumental methods of chemical analysis. Included are such topics as ultraviolet, infrared, nuclear magnetic resonance, emission and atomic absorption spectroscopy. Mass spectrometry, thermal and electrochemical methods of analysis will be discussed. One session per week. 3 credits. Prerequisites: 86.122, 99.143. Corequisite: 84.316. Offered in spring 1980 and alternate years thereafter.

84.316 ANALYTICAL CHEMISTRY II LABORATORY

Laboratory experiments designed to compliment the coverage of topics in 84.314. One session per week. 3 credits. Prerequisite: 86.122, Corequisite: 84.314. Offered in spring 1980 and alternate years thereafter.

84.334 ADVANCED INORGANIC CHEMISTRY

An introduction to modern theories of atomic structure and chemical bonding with emphasis on physical chemical principles and properties. Considerable time will be spent on coordination compounds including topics such as descriptive chemistry, biochemical importance, and ligand field theory. One session per week. 3 credits. Prerequisite: 84.345. Offered in fall 1979 and alternate years thereafter.

84.344 PHYSICAL CHEMISTRY I

The 84.344-84.345 sequence covers basic physical chemical topics: laws of thermodynamics, solutions, chemical and phase equilibria, electrochemistry, kinetics and atomic and molecular structure. One session per week. 3 credits. Prerequisites: 86.122, 90.132, 99.143. Corequisite: 84.346.

84.345 PHYSICAL CHEMISTRY II

See description under 84.344. One session per week. 3 credits. Prerequisite: 84.344. Corequisite: 84.347.

84.346 PHYSICAL CHEMISTRY LABORATORY I

Laboratory work designed to exemplify the principles covered in 84.344. One session per week. 3 credits. Corequisite: 84.344.

84.347 PHYSICAL CHEMISTRY LABORATORY II

Laboratory work designed to exemplify the principles of chemical kinetics, equilibrium and spectroscopy. One session per week. 3 credits. Prerequisite: 84.346. Corequisite: 84.345.

86.121 ANALYTICAL CHEMISTRY

Class laboratory. The principles and calculations of gravimetric and volumetric analysis. One session per week, 3 credits. Prerequisites: 84.122, 90.115.

86.122 ANALYTICAL CHEMISTRY

Class and laboratory. Advances concepts in wet methods of analysis. One session per week, 3 credits. Prerequisite: 86.121.

86.231 ORGANIC CHEMISTRY LABORATORY I

Introduction to laboratory techniques in organic chemistry and application of concepts covered in 84.223. One session per week. 3 credits. Corequisite: 84.223.

86.232 ORGANIC CHEMISTRY LABORATORY II

Laboratory applications of concepts covered in 84.224. One session per week. 3 credits. Prerequisite: 86.231. Corequisite: 84.224.

86.352 CHEMICAL APPLICATIONS

A study of the chemical principles applied to one or more areas of industrial technology. One session per week. 3 credits. Prerequisite: 84.345. Offered in spring 1980 and alternate years thereafter.

86.361 ADVANCED ORGANIC CHEMISTRY

An in-depth coverage of properties and reactions of organic compounds stressing such aspects as synthetic methods and reaction mechanisms. One session per week. 3 credits. Prerequisites: 84.224, 84.345. Not offered in fall 1979. Will be offered in fall 1980 and alternate years thereafter.

86.362 ADVANCED ORGANIC CHEMISTRY

A continuation of advanced level study of organic compounds stressing synthesis and reaction mechanisms. One session per week. 3 credits. Not offered in spring 1980. Will be offered in spring 1981 and alternate years thereafter.

86.471 INDUSTRIAL CHEMISTRY

Discussion of essential chemical principles in selected areas of industrial concern, including the effect of industrial processes on the environment. One session per week. 3 credits. Prerequisites: 84.224, 84.345. Offered in fall 1979 and alternate years thereafter.

86.481 CHEMISTRY OF HIGH POLYMERS

The physical and organic chemistry of monomers and polymers, including a consideration of nonbonding forces, spectroscopic methods of structure determination, fractionation and thermodynamics. One session per week. 3 credits. Prerequisites: 84.224, 84.345. Not offered in fall 1979. Will be offered in fall 1980 and alternate years thereafter.

86.482 CHEMISTRY OF HIGH POLYMERS

A continuation of 86.481. Topics presented will include methods of molecular weight determinations for polymers in solution, kinetics of condensation and addition polymerization, and mechanisms of free radical and ionic polymerization. One session per week. 3 credits. Not offered in spring 1980. Will be offered in spring 1981 and alternate years thereafter.

86.521 SPECIAL TOPICS IN CHEMISTRY

An in depth treatment of one or more areas of advanced chemistry or industrial applications of chemistry. Students enrolling for the course must have the permission of the chemistry coordinator. One session per week, 3 credits.

SCIENCE

81.111 PRINCIPLES OF BIOLOGY I

Introduction to biological systems above the unit organismal level. Study of plants and animals with respect to reproduction and development, behavior, genetics, evolution, ecology and biogeography. One session per week, 3 credits.

81.112 PRINCIPLES OF BIOLOGY II

An introduction to the structure and function of biological processes at the sub-cellular, cellular, and organismal levels. Discussions include metabolism, growth, differentiation, and physiology of plants and animals. One session per week, 3 credits.

83.345 & 83.346 EMERGENCY MEDICAL CARE I & II

This course provides the necessary knowledge and skill to give emergency medical care at the emergency scene. The curriculum covers the basics of understanding the emergency situation, as well as specialized emphasis in respiration and resuscitation, bleeding, wounds and shock, use and care of emergency equipment commonly accepted and employed such as suction machines, oxygen delivery systems, backboards, fracture kits, obstetrical kits, stretchers of various types and light rescue tools. Also taught are management of mentally disturbed patients, and initial care of poison and burn patients along with environmental emergencies. Included in the course are lectures on anatomy and physiology by local physicians. Successful completion of the course entitles one to take the National Registry Exam for Emergency Medical Technician. One session per week, 3 credits per semester.

88.141 INTRODUCTION TO WEATHER AND CLIMATE

This introductory course is designed to provide the interested student with information and knowledge about the atmosphere's dynamic reactions to energy inputs resulting in the spatial distribution of climate around the world. Also, an investigation of man's perception of climate will be included. One session per week, 3 credits.

89.101 GENERAL GEOLOGY I

A study of the Earth with emphasis on earth materials, earth structure (crustal and internal), earth history and the development of life. Gives the general student an understanding of the dynamic Earth and provides a foundation for advanced work. One session per week, 3 credits.

89.102 GENERAL GEOLOGY II

A continuation of 89.101 with emphasis on the surface of the Earth and landform development. Includes special topics, introducing the student to recent geological research and applied geological knowledge. Designed for the general and continuing student. One session per week, 3 credits. Prerequisite: 89.101.

94.201 AIR POLLUTION

Problems of air pollution including sources, atmospheric dispersion and meteorology, effect of pollutants on man and his environments, standards and controls. One session per week, 3 credits. Prerequisites: 84.126; 90.115.

94.202 ENVIRONMENTAL CHEMISTRY

A broad survey of the chemistry of pollutants. Included will be a characterization of pollutants in terms of chemical and physical nature and properties, sources of pollution both man and natural, and ecological consequences of pollution. One session per week, 3 credits. Prerequisite: 84.126.

94.341 FUNDAMENTALS OF SCIENCE I

A study of the basic concepts of science. Topics to be covered include: the influence of the scientific method in understanding science, energy and motion, Newtonian physics, electricity, magnetism, light, atomic theory, radioactivity, and basic concepts of chemistry. Methods of scientific calculations will be treated. Audio-visual demonstrations will be presented. One session per week, 3 credits. Prerequisite: 90.112 or 90.113.

94.342 FUNDAMENTALS OF SCIENCE I

A continuation of the study of the basic concepts of science. Topics to be covered include: chemical reactions, ions and solutions, the Periodic Law, basic organic chemistry, earth materials, environmental problems of physical science, human biology, and environmental biology. One session per week, 3 credits. Prerequisite: 94.341.

95.141 PHYSICS I

Class and laboratory. The principles of statics and dynamics including equilibrium of a particle and of a rigid body, motion in one dimension and in the plane, particle dynamics and gravitation. One session per week, 3 credits. Prerequisite: 90.115 (May be taken concurrently).

99.142 PHYSICS II

Class and laboratory. Work and energy, impulse and momentum, rotational dynamics, elasticity, harmonic motion, hydrostatics and hydrodynamics. One session per week, 3 credits. Prerequisites: 95.141; 90.115 (May be taken concurrently).

99.143 PHYSICS III

Class and laboratory. Temperature and expansion, quantity of heat, transfer of heat, first and second laws of thermodynamics, thermal properties of solids, liquids, and gases, wave motion, vibrating bodies, and a coustical phenomena. One session per week, 3 credits. Prerequisite: 99.142.

MATHEMATICS

All mathematics courses, including those designated as Computer Science, except 90.010 and 90.111 are transferrable to the University of Lowell day division upon appropriate University approval. Courses with the prefix 92 are equivalent to those in the day school with the same number. Day school students wishing to elect courses with the prefix 90 must consult the Chairperson and/or Coordinator in order to ascertain course (a) equivalence.

90.010 INTRODUCTORY MATHEMATICS

A transitional course designed for students with a limited mathematics background. The main purpose of this course is to give students an insight into the structure of basic mathematics including algebra, and to increase the student's manipulative skills in this area. One session per week, 3 credits.

90.111 MATHEMATICS A

Real numbers, factoring, fractions, linear equations in one unknown, functions and graphs, exponents and radicals, systems of linear equations, and the quadratic equation. Emphasis is placed on the solution of word problems. One session per week, 3 credits. Prerequisite: Two years of high school mathematics, including one year of algebra.

90.112 MATHEMATICS B

Mathematics for Business Administration Majors. Includes: Set theory, algebraic equations, coordinate geometry, relations and functions, and linear functions with applications to business. One session per week, 3 credits. Prerequisite: 90.111 or satisfactory score on Math Placement Test.

90.113 INTRODUCTION TO ANALYSIS I

Review of algebra, equations, functions, inequalities and quadratic functions, systems of linear equations and inequalities, exponential and logarithmic functions, circular functions. One session per week, 3 credits. Prerequisite: satisfactory score on the Evening School Mathematics Placement Test or 90.111 or equivalent.

90.115 INTRODUCTION TO ANALYSIS II

Trigonometric functions and identities, inverse functions; vectors and applications, complex numbers, polynomials, equations of second degree and their graphs, series. One session per week, 3 credits. Prerequisite: 90.113.

90.119 MATHEMATICS C

Mathematics for Business Administration majors. Includes: Non linear algebraic functions, transcendental functions, logarithms, functions in finance, inequalities and linear programming and calculus with business applications. One session per week, 3 credits. Prerequisite: 90.112.

90.130 CALCULUS FOR BUSINESS ADMINISTRATION

Graphical representation: straight lines and equations. Limits. Differential Calculus of one variable, with applications to optimization. Marginal Analysis. Composite and implicit functions. Higher order derivatives. Partial derivatives. Introduction to Integral Calculus with applications in economics. Further integration techniques and applications. One session per week, 3 credits. Prerequisite: 90.119.

90.131 CALCULUS I *

Rate of change of a function, derivatives of algebraic functions, applications of the derivative, and introduction to integration. One session per week, 3 credits. Prerequisite: 90.115.

90.132 CALCULUS II

Applications of the definite integral, transcendental functions, and methods of integration. One session per week, 3 credits. Prerequisite: 90.131.

90.211 MODERN CONCEPTS IN MATHEMATICS

College level coverage of fundamental concepts including sets, logic, relations and functions, and mathematical systems. One session per week, 3 credits. Prerequisite: 90.115.

90.221 APPLIED LINEAR ALGEBRA I

An introduction to sets and mathematical logic. The basic properties of linear mappings, matrices, scalar products and orthogonality, systems of linear equations. Applications of the above. One session per week, 3 credits. Prerequisite: 90.231 or permission of coordinator.

90.222 APPLIED LINEAR ALGEBRA II

Matrices and bilinear forms; symmetric, hermitian and unitary operators, eigenvectors and eigenvalues: the Caley Hamilton, Sylvester and Spectral Theorems. Applications of the above. One session per week, 3 credits. Prerequisite: 90.221.

90.231 CALCULUS III

Methods of integration, determinants of the order "n", hyperbolic functions, polar coordinates, vector analysis and space coordinates. One session per week, 3 credits. Prerequisite: 90.132.

90.232 CALCULUS IV

Partial differentiation, directional derivatives, gradients, exact differentials, line integrals, multiple integrals, surface area, Taylor's Theorem, Fourier series, and complex functions. One session per week. Prerequisite: 90.231.

90.241 STATISTICS FOR BUSINESS I

Descriptive statistics, sophisticated counting techniques and other components of probability, simple random variables and their distributions, bivariate functions, sampling theory, properties of estimators, confidence intervals, and hypothesis testing. One session per week, 3 credits.

90.242 STATISTICS FOR BUSINESS II

Analysis of variance, applied regression theory, correlation analysis, and other selected topics. One session per week, 3 credits. Prerequisite: 90.241.

92.206 ELEMENTARY STATISTICAL ANALYSIS

A course designed primarily for the social scientist. Includes graphic presentations, measures of central tendency, variability, correlation, standard scores and the unit normal distribution, hypotheses and statistical inference, and tests of significance. One session per week, 3 credits. For

Medical Technology and Nursing students only.

92.234 DIFFERENTIAL EQUATIONS

A course in ordinary differential equations including equations of order one, linear differential equations, non-homogeneous equations, method of undetermined coefficients, the Laplace transform, systems of equations, electric circuits and networks, existence and uniqueness of solutions, and nonlinear equations. One session per week. 3 credits. Prerequisite: 90.232.

92.301 APPLIED MATHEMATICS I

Matrices. Vector analysis, review of vector algebra, vector calculus, divergence theorem. Green's theorem and Stokes' theorem. One session per week, 3 credits. Prerequisite: 90.232.

92.302 APPLIED MATHEMATICS II

Series solutions of ordinary differential equations, Bessel functions, Legendre functions. Ordinary differential equations, boundary value problems. Fourier series and integrals. Partial differential equations of physics and engineering, separation of variables. One session per week, 3 credits. Prerequisite: 92.234.

90.315 PARTIAL DIFFERENTIAL EQUATIONS I

Basic concepts in partial differentiation. Classification and solution of first order and higher order linear partial differential equations. Introduction to Bessel, Legendre, and other orthogonal functions. Boundary value problems, including application of Fourier Series, Fourier Integrals, and Laplace Transforms. One session per week, 3 credits. Prerequisite: 92.234.

92.362 METHODS IN NUMERICAL ANALYSIS I

Theory and applications of numerical techniques including: error analysis, non-linear systems of equations, matrices, eigenvalues, interpolation and collocation of polynomials, numerical integration. Computer solutions are emphasized. One session per week, 3 credits. Prerequisites: 90.361; 90.231.

90.454 METHODS IN NUMERICAL ANALYSIS II

Continuation of 92.362 including: numerical solution of ordinary and partial differential equations, boundary value problems, curve-fitting, linear programming, error analysis and computer solutions. One session per week, 3 credits. Prerequisite: 92.362.

92.381 OPERATIONS RESEARCH I

The use of decision models in industrial systems. Quantitative approach to the industrial alternative. Fundamentals of probability and statistics, PERT techniques, methods of optimization using calculus, inventory control models and queueing models. One session per week, 3 credits. Prerequisite: 90.132 or 90.130.

92.382 OPERATIONS RESEARCH II

A continuation of 92.381. Topics include: linear programming, transportation models, nonlinear programming, dynamic programming, games and strategies, Markov analysis, and simulation techniques. One session per week, 3 credits. Prerequisite: 92.381.

92.383 INTRODUCTION TO STATISTICS

Sets and probability laws, random variables, mathematical expectation, measure of central tendency and variance. Study of discrete and continuous probability distribution, sampling theory, tests of hypothesis. Regression and correlation. One session per week, 3 credits. Prerequisite: 90.111, or two years of high school Algebra.

92.407 INTRODUCTION TO PROBABILITY THEORY

Probability functions and densities, expectations. Moments of probability distributions. Central limit theorem. One session per week, 3 credits. Prerequisite: 90.232.

92.408 INTRODUCTION TO MATHEMATICAL STATISTICS

Sampling, decision theory, estimation, hypothesis testing, regression and correlation. One session per week, 3 credits. Prerequisite: 92.407.

92.411 COMPLEX VARIABLES I

Complex numbers. Functions of a complex variable. Mappings. Derivatives. Analytic functions. Elementary functions. Integrals. Laurent series. Residues and poles. Contour integration. One session per week, 3 credits. Prerequisite: 90.232.

92.412 COMPLEX VARIABLES II

Transformations. Conformal mappings. Boundary conditions. Application in heat conduction, electrostatic potential, and fluid flow. Gamma and beta functions. Inverse Laplace transform. Riemann surfaces. One session per week, 3 credits. Prerequisite: 92.411.

92.421 ABSTRACT ALGEBRA I

Elementary group theory, groups, cosets, normal subgroups, quotient groups, isomorphisms, homomorphisms, series of groups, the Sylow theorems, free groups and homology groups. One session per week, 3 credits. Prerequisite: 90.132.

92.422 ABSTRACT ALGEBRA II

Elementary ring and field theory, quotient rings and ideals, homomorphisms of rings, rings of polynomials, algebraic extensions, automorphisms of fields, separable extensions. Galois Theory. Introduction to categories and functors. One session per week, 3 credits. Prerequisite: 92.421.

92.442 BOUNDARY VALUE PROBLEMS

The Fourier series as a tool of analysis. Orthogonal functions, convergence tests, the Fourier integral partial differential equations of physics and engineering, and boundary value problems. One session per week, 3 credits. Prerequisite: 90.315.

92.498 MATHEMATICS SEMINAR

Student reading, writing, and criticism of topics from current literature. Review of some important elements of undergraduate work. One session per week, 3 credits. Prerequisite: permission of Coordinator.

COMPUTER SCIENCE

(Students registering for programming courses may be required to spend non-class time at the Institute's Computer Center).

90.251 BUSINESS COMPUTER APPLICATIONS I

Computer fundamentals for business including: computer numbering systems and organization, instruction sets, data elements, introduction to programming, flow charting, input-output devices and media, a survey of programming languages and computer economics. One session per week, 3 credits. Not available for Information Systems and Applied Mathematics Majors.

90.252 BUSINESS COMPUTER APPLICATIONS II

A continuation of 90.251 including the roles and tools of the systems designer and various levels of management in creating computerized business systems, feasibility studies, economics of corporate computer use and its impact at all levels. One session per week, 3 credits. Prerequisite: 90.251.

92.263 FORTRAN PROGRAMMING

Programming principles of Fortran including input-output, arithmetic and control statements; arrays, functions and subroutines. Structured programming will be emphasized. Students will process at least ten problems on the Cyber 71. One session per week, 3 credits. Prerequisites: 90.112 or 90.113.

92.264 CONCEPTS OF COMPUTING

Types of computers and their operation. Characteristics, storage, and calculation principles. Addressing schemes. Computer arithmetic and logic, numbering systems, instruction codes, input-output organization and devices, organizing computer files and data communications. One session per week, 3 credits.

92.365 COBOL PROGRAMMING I

Programming principles of COBOL, the Common Business Oriented Language; identification, environment, data, and procedures divisions, introduction to compilation procedures and diagnostic processing. Programming of basic business applications such as inventory and accounting problems. One session per week, 3 credits. Prerequisite: 92.264.

92.366 ADVANCED FORTRAN PROGRAMMING

Advanced FORTRAN programming techniques employing subroutines, subprograms, flowcharting and documentation. Topics will include random number generation, simulation and file manipulation. One session per week, 3 credits. Prerequisite: 92.263, 90.119.

92.367 ASSEMBLER LANGUAGE PROGRAMMING I

Absolute machine language coding and the symbolic programming language; the coding of practice problems on a high-speed digital computer using the basic computer instructions including arithmetic, input-output, logic, control operations and data manipulation. One session per week, 3 credits. Prerequisite: 92.264 or 92.263.

92.368 COBOL PROGRAMMING II

A continuation of 92.365. Advanced programming problems in COBOL, discussion of COBOL systems software, sophisticated routines and generalized business file manipulation. One session per week, 3 credits. Prerequisite: 92.365

92.461 SYSTEMS SIMULATION AND MODELING

Procedures in model construction and computerized simulation, modeling tools and techniques, model conceptualization and implementation, selected applications of simulation. One session per week, 3 credits. Prerequisite: 92.263, 92.383.

92.462 ADVANCED PROGRAMMING SYSTEMS

Basic concepts of assembly programs and compilers, macro-generators, utility programs, supervisions, monitors and high level languages. One session per week, 3 credits. Prerequisite: 92.367.

92.463 SYSTEMS DESIGN AND DEVELOPMENT I

A general study of the design and development of computer-oriented data processing systems including: the approach requirements of the system, developing the solution, data controls, system controls, system evaluation and reporting to management. One session per week, 3 credits. Prerequisite: 92.367.

92.464 SYSTEMS DESIGN AND DEVELOPMENT II

A continuation of 92.463 including: finalizing and implementing the system, post-installation evaluation, and interdepartmental coordination, case studies. One session per week, 3 credits. Prerequisite: 92.463.

92.467 ASSEMBLER LANGUAGE PROGRAMMING II

A continuation of 92.367. Symbolic programming using advanced techniques including macro in-

structions, indirect addressing, file generation and processing, magnetic tape and magnetic disk applications. One session per week, 3 credits. Prerequisite: 92.367.

92.468 MINICOMPUTER PRINCIPLES AND APPLICATIONS

Current minicomputer practices covering both hardware and software including basic minicomputer instructions sets, operating systems, assembler and I/O programming, utilities, interrupts, and interfaces. Scientific, industrial and business applications throughout. One session per week, 3 credits. Prerequisites: 92.367; 90.132.

92.469 COMPILER CONSTRUCTION TECHNIQUES

Typical compiler organization is studied including symbol tables, various types of scans, object code generation, error diagnostics, and optimization techniques. Segments of a classroom compiler are written by students. One session per week, 3 credits. Prerequisite: 92.367.

92.470 DATA COMMUNICATIONS

Analysis and use of remote computing systems including time-sharing remote batch and real-time systems. Design characteristics, applications, data communication, economics and management of such systems. One session per week, 3 credits. Prerequisite: 92.367.

92.471 MANAGING THE DATA PROCESSING FUNCTION

Administering and controlling the company data processing activity; programming administration, DP project management, evaluating and training personnel, equipment selection, cost estimating and control. One session per week, 3 Credits. Prerequisite: 92.463.

92.474 DATA BASE MANAGEMENT

An introduction to Data Base software. The structures and examples of existing systems. The computer facility will be used to illustrate some of the concepts of the software. One session per week, 3 credits. Prerequisite: Permission of Coordinator.

CIVIL ENGINEERING TECHNOLOGY

15.123 SURVEYING I

Class and laboratory. Principles of data gathering by surveying processes. Theories and methods of instrumental techniques for measurement of lengths, directions, coordinates, areas, volumes and topographic data. Introduction to and use of electronic distance measuring equipment. Problems are used to illustrate processing of fieldwork data. Illustrative fieldwork projects to give facility in basic surveying techniques. One session per week, and five Saturdays of fieldwork. 4 credits. Prerequisites: 90.115; 23.111.

15.124 SURVEYING II

Class and laboratory. A continuation of 15.123. Application of basic surveying techniques of engineering problems implicit in transportation engineering, industrial and domestic housing, utilities for the safety and convenience of humans, use of land resources and the supply and control of water. Fieldwork projects typical of the applications of surveying to engineering. One evening session per week, and five Saturdays of fieldwork. 4 credits. Prerequisite: 15.123.

15.237 STATICS

The fundamentals of statics, including such topics as force systems, resultants, equilibrium, friction, first moments of masses and areas. One session per week, 3 credits. Prerequisites: 90.132; 95.141.

15.238 DYNAMICS (CE)

Laws of kinematics of particles and rigid bodies involving absolute and relative motion. Newton's laws as applied to the kinetics of rigid bodies in motion. Principles of work and energy; impulse and momentum. One session per week, 3 credits. Prerequisites: 15.237; or 23.221.

15.239 STRENGTH OF MATERIALS (C.E.)

Principles of strength of materials, centric, torsional, and flexural loading, principal stresses. Mohr's stress cycle, strain, temperature effects, shear and moment diagrams. One session per week, 3 credits. Prerequisites: 15.237; or 23.221.

15.242 STEEL DESIGN I

The selection and proportioning of structural steel members to resist axial, shearing, bending and combined stresses. The design of simple riveted, bolted and welded connections. One session per week, 3 credits. Prerequisites: 15.251.

15.243 CONSTRUCTION MATERIALS

Class and laboratory. Properties of materials used in engineering highways and structures. Discussion of metals, timber, cement, mortars, concrete aggregates, oils, asphalts, and other building materials. One session per week, 3 credits. Prerequisite: 99.142.

15.246 INTRODUCTION TO HYDRAULICS

Properties of fluids, principles of hydrostatic pressure, fluid flow with applications to orifices, tubes, weirs, and pipes. One session per week, 3 credits. Prerequisites: 15.239; 15.238; or 23.222.

15.251 STRUCTURAL ANALYSIS I

Analysis of statically determinate structures. Reactions and stresses, framed structures, beams, trusses, graphic statics, roof trusses, truss and girder bridges, long span bridges, and lateral bracing and portals. One session per week, 3 credits. Prerequisite: 15.239.

15.253 REINFORCED CONCRETE I

The selection and design of reinforced concrete members to resist axial, shearing, bending and combined stresses by the Working Stress Design method and the Strength method. Design of rectangular beams, T-beams, and slabs. One session per week, 3 credits. Prerequisites: 15.251; 15.239 or 23.223.

15.254 SOIL MECHANICS I

An elementary treatment of the physical properties of soils such as bearing and shearing strengths, soil moisture content, compressibility, consolidation, and settlement. The applications of such soil properties to typical foundations as piles, caissons and spread footings. One session per week, 3 credits. Prerequisites: 15.243; 15.239.

15.255 ENVIRONMENTAL ENGINEERING I

Class and laboratory. The chemistry and biology of water and wastewater including the water treatment process design and water and wastewater laboratory analyses. One session per week. 3 credits. Prerequisites: 90.131, 15.124.

15.257 HIGHWAY ELEMENTS

An integral presentation of the broad field of basic highway principles covering highway administration, economics and finance, planning, design, soils, drainage, earthwork operations, pavements, surface types, cements, and highway maintenance. One session per week, 3 credits. Prerequisite: 15.124.

15.352 STRUCTURAL ANALYSIS II

A continuation of 15.251. Deflection calculations for beams, trusses, and frames. Analyses of trusses, beams, and frames by energy methods and moment distribution. One session per week, 3 credits. Prerequisite: 15.251.

15.356 ENVIRONMENTAL ENGINEERING II

Class and laboratory. A continuation of 15.255 with emphasis on pipe design, domestic wastewater treatment processes and their design, industrial waste treatment, and stream pollution. One session per week. 3 credits. Prerequisites: 15.255, 15.246.

15.383 STEEL DESIGN II

A continuation of 15.242. Design of beam-columns, moment-resisting connections, built-up plate girders, and composite beam and slab sections. Consideration of basic structural members as elements within frame and floor systems. One session per week, 3 credits. Prerequisite: 15.242.

15.391 REINFORCED CONCRETE II

A continuation of 15.253. The analysis of and design for the behavior of the basic concrete members in structural frames and floor systems. The use of design curves and graphs as an aid to the solution of practical problems. One session per week, 3 credits. Prerequisite: 15.253.

15.392 SOIL MECHANICS II

A continuation of 15.254 with emphasis on application of principles. The use of field and laboratory tests in the design of foundation and the treatment of embankments. One session per week, 3 credits. Prerequisite: 15.254.

15.394 SOIL MECHANICS LAB

Common soil laboratory tests including soil classification gradation, atterberg limits, strength and compressibility tests. One session per week, 3 credits. Prerequisite: 15.254.

15.461 ADVANCED SURVEYING

Application of higher surveying techniques to the providing of information and the solution of engineering problems. Topics covered include precise measurement of angles, methods of determining elevations with high precision, consideration of photogrammetric techniques, and the basic principles of engineering astronomy. One session per week, 3 credits. Prerequisite: 15.124; 90.132.

15.486 TRANSPORTATION ELEMENTS

A continuation of 15.257. Presentation of selected topics in the field of transportation such as traffic, integrated public transportation, planning and developmental impact of transportation routes. One session per week, 3 credits. Prerequisite: 15.257.

15.495 CIVIL ENGINEERING ELECTIVE

Advanced topics from the sub-disciplines of Civil Engineering; that is structures, transportation, sanitary engineering or soil mechanics. Offered at student request and conditional on sufficient enrollment. One session per week, 3 credits. Prerequisites: Completion of the required courses in the sub-discipline in which course is offered.

ELECTRONIC ENGINEERING TECHNOLOGY

17.127 ELECTRICAL FUNDAMENTALS

An introduction to the basic principles of electricity; including the concept of voltage, current, resistance, inductance, and capacitance; Ohm's and Kirchhoff's Laws; Thevenin's and Norton's theorems; laboratory instruments. Also included is basic introduction to the various types of sensors (temperature, acceleration, strain, light, radiation, etc.) and active devices such as the transistor. One session per week, 3 credits. Not available for EET majors.

17.128 BASIC ELECTRONICS

A continuation and elaboration of the topics covered in 17.127. Particular emphasis is placed on the characteristics of solid state active devices and their interconnection with sensors and transducers. Theory includes analysis of power supplies and filters; current, voltage, and power amplifiers; oscillators; logic networks, and sequential networks. One session per week, 3 credits. Not available for EET majors. Prerequisite: 17.127.

17.129 ELECTRICAL FUNDAMENTALS LABORATORY

An introduction to basic laboratory instruments and electronic components. Resistors, inductors, and capacitors; meters; cathode-ray oscilloscope; power supplies; amplifiers, oscillators, bridges, and signal generators. Written laboratory reports are required. One session per week, 3 credits. Corequisite: 17.127. Not available for EET majors.

17.223 ELECTRIC CIRCUITS I

Units of voltage, current, and resistance; voltage and current sources; charge; energy and power; resistance of conductors; Kirchhoff's laws; basic network theorems; fundamentals of magnetism; magnetic circuits; and meters. One session per week, 3 credits. Prerequisites: 90.131, 99.142 (both may be taken concurrently).

17.224 ELECTRIC CIRCUITS II

A continuation of 17.223. Inductance and capacitance, simple inductive and capacitive circuits; alternating current and voltage; phasor algebra; inductive and capacitive reactance; impedance and admittance; passive networks; equivalent networks and sources; dependant sources; power in alternating-current circuits; resonance; transformer principles; and polyphase circuits. One session per week, 3 credits. Prerequisites: 17.223, 90.132. (May be taken concurrently).

17.225 ELECTRIC CIRCUITS III

An extension and elaboration of the principles covered in 17.223 and 17.224. Analysis of circuits and systems undergoing transient conditions caused by a variety of excitations, both natural and forced, utilizing the Laplace-Transform method. Application to mechanical, fluidic, thermal circuits and filters are presented as an introduction to electromechanical, electronic and control systems. One session per week, 3 credits. Prerequisite: 17.224.

17.237 ELECTRONICS LABORATORY I

An introduction to basic laboratory instruments and electronic components. Resistors, inductors, and capacitors; meters; cathode-ray oscilloscope; power supplies, oscillators and signal generators; bridges and semiconductor characteristics and applications. Written laboratory reports are required. One session per week, 3 credits. Prerequisite: 17.224.

17.240 ELECTROMECHANICS

A combination lecture and laboratory course, introducing magnetic circuits, transformers, and both alternating and direct current machines. One session per week, 3 credits. Prerequisite: 17.224.

17.241 ENERGY CONVERSION

The fundamentals of the five major methods of direct energy conversion, that is, thermoelectricity, photovoltaics, thermionics, magnetohydrodynamics and fuel cells will be studied. The study will include various energy storage methods and conversion techniques. One session per week, 3 credits. Prerequisites: 17.240, 17.362.

17.350 CONTROL SYSTEMS I

An introduction to linear servomechanism theory; dynamic analysis of linear systems; Laplace transform; dynamic response of physical systems, complex plane analysis; automatic feedback control; and stability analysis. One session per week, 3 credits. Prerequisites: 17.225, 90.132, 99.142.

17.359 ELECTRONICS LABORATORY II

Experiments on solid-state devices and circuits, analog and digital, are performed with emphasis in their fundamental operation and application. One session per week, 3 credits. Prerequisites: 17.237, 17.240, 17.362.

17.360 ELECTRONICS LABORATORY III

Students are required to perform state-of-the-art experiments related to the latest solid-state devices (both analog and digital) available. Use of the computer as a tool to solve experimental problems is encouraged. A final examination (oral and written) and several written laboratory reports are required. One session per week, 3 credits. Prerequisites: 17.359, 17.363.

17.361 PROJECT LABORATORY A

Possible projects are outlined and discussed. Students submit detailed proposals. The best feasible projects proposed are then assigned to teams of students for implementation. Use of the computer as a tool to solve experimental problems is encouraged. One session per week, 3 credits. Prerequisites: 17.360, 17.364.

17.362 ELECTRONICS I

An introduction to electronics with emphasis on solid-state physics and devices. The PN junction, is discussed under various biasing conditions. Related subjects such as depletion capacitance, diffusion capacitance, zener and avalanche breakdown are covered. Various types of PN junction diodes, PIN, zener, varactor, photo, step recovery, etc., are discussed with respect to circuit applications. Diode circuits and applications such as the voltage doubler, limiters, and rectifiers are studied. The transistor is introduced and its operation in the cutoff, active, and saturation mode is described. Simple models for the transistor are introduced. Also included is an introduction to diode-transistor logic (DTL), and transistor-transistor logic (TTL). One session per week, 3 credits. Prerequisites: 17.224, 90.132, 99.142.

17.363 ELECTRONICS II

A continuation of the study of transistor theory and operation started in 17.362. Small signal equivalent circuits such as the hybrid and the hybrid- π , are discussed with emphasis on the frequency limitations of each model. Biasing is discussed and studied from a feedback viewpoint. The gain and impedance characteristics of the three basic transistor configurations are investigated and compared. The study of single stage, multistage, tuned, and power amplifiers is also included. One session per week, 3 credits. Prerequisite: 17.362.

17.364 ELECTRONICS III

A continuation of 17.363. Electronics II. Topics include bipolar-junction transistors, field-effect transistors, unijunction transistors, and silicon-controlled rectifiers. Both positive and negative, feedback amplifiers are investigated with respect to the advantages, and disadvantages, associated with feedback stability and frequency response. Oscillator circuits of various types are discussed and analyzed. One session per week. 3 credits. Prerequisites: 17.363.

17.365 INTEGRATED CIRCUITS I

The linear and non-linear applications and the characteristics of linear integrated devices will be studied. Optimal use of industry published specifications, application notes, and handbook data will be stressed. Topics include: Operational Amplifiers, Regulators, Comparators, Analog Switches, Time Function Generators, Instrumentation Circuits, Logarithmic Circuits, Computing Circuits, and Signal Processing Circuits. One session per week. 3 credits. Prerequisites: 17.350, 17.364, 17.372.

17.366 INTEGRATED CIRCUITS II

A continuation of 17.365 primarily emphasizing the characteristics and applications of digital integrated devices, data acquisition, and data conversion. Topics include: analog-to-digital and digital-to-analog converters, sample and hold modules, logic families (TTL, CMOS, ECL, MECL, etc.), large scale integrated circuits (ROM's, RAM's etc.). One session per week, 3 credits. Prerequisite: 17.365.

17.371 LOGIC DESIGN I

The fundamentals of arithmetic, algorithms, devices and subsystems which are common to all digital computational hardware systems will be taught. Topics include: number systems, precision and resolution, binary and decimal coding, register processing and display. Traditional algebraic building blocks will be combined with the forming of logic problems toward computer solution. One session per week, 3 credits. Prerequisite: 17.224.

17.372 LOGIC DESIGN II

An extension of the principles of Logic Design I, to sequential circuits and processor systems. State diagrams, tabular and graphical techniques will be applied to several classes of sequential systems in order to teach design skills for the highly reliable logic circuits. Operational equations for both real and hypothesized devices will form the basis for design to equip the student for both current and future computer technologies. One session per week, 3 credits. Prerequisite: 17.371.

17.376 ELECTROMAGNETIC THEORY I

Review of vector analysis electrostatic theory and applications including electric field, potential, Gauss's law, divergence, stored energy, boundary conditions, forces, dielectric materials, conductivity, electrostatic mapping, capacitance, Poisson's and Laplace's equations. Magnetostatic theory, including the magnetic field, Lorentz force, motion of charged particles in combined electric and magnetic fields, Amperes law, inductance, stored energy, boundary conditions, magnetic materials, magnetics and superconductors. Applications include two-wire transmission line, electrostatic shielding, electrostatic photography, precipitators, corona, electron emission, bubble memory devices, MHD power generation, Hall effect, magnetic shielding, and magnetic circuit design. One session per week. 3 credits. Prerequisite: 92.234.

17.381 ENGINEERING PROBLEM SOLUTIONS I

A culmination and sophistication of the problem solving techniques used throughout the Electronic Engineering Technology Program. The digital computer will be used extensively as an aid in the solution of these problems. One session per week, 3 credits. Prerequisites: 17.225, 92.234, 92.263.

17.382 ENGINEERING PROBLEM SOLUTIONS II

An extension and elaboration of the problem solving techniques presented in 17.381. One session per week, 3 credits. Prerequisites: 17.372, 17.381.

17.391 PROJECT LABORATORY B

Students are required to submit project proposals compatible with the advanced technical electives offered. Teams are then assigned to implement selected projects. Use of the computer as a tool to solve experimental problems is encouraged. Written laboratory reports are required. One session per week, 3 credits. Prerequisites: 17.361, 17.366.

17.392 PROJECT LABORATORY C

A continuation of laboratory projects of the type offered in Project Laboratory B (17.391). Written reports are required. One session per week, 3 credits. Prerequisite: 17.391.

17.415 PULSE TECHNIQUES I

Linear wave shaping, pulse transformers, steady state switching characteristics of devices; clamp-and switching circuits; and logic circuits. One session per week. 3 credits. Prerequisite: 17.364.

17.416 PULSE TECHNIQUES II

Bistable, monostable, and astable multivibrators; negative resistance devices; negative-resistance switching circuits; blocking oscillator circuits; time base generators; and transient switching characteristics of diodes and transistors. One session per week. 3 credits. Prerequisite: 17.415.

17.417 MINICOMPUTER PROGRAMMING

An introduction to fundamentals of absolute and symbolic programming. Typical digital computer organization and operation from a register-reference point of view. Computer word formats, instructions, and symbolic coding. Address modification, index registers and looping. Use of system programs including Debug, Editor, and Assembler. Subroutines: calling sequences, multiple entry and return. Programs assignments will be run by students on one of the University's minicomputers. One session per week, 3 credits. Prerequisite: 17.382.

17.453 TRANSMISSION THEORY I

Transmission systems, reactance, capacitance, three-phase line calculations, corona power, lighting arresters, transmission structures, transformer substations, distribution circuits, and automatic substations. One session per week, 3 credits. Prerequisite: 17.241 (may be taken concurrently).

17.469 CONTROL SYSTEMS II

A continuation of 17.350. Control loop design; real frequency and transient response; Nyquist stability criterion; compensation, optimum design; nonlinear systems; and a.c.ers. One session per week, 3 credits. Prerequisite: 17.382.

17.433 SWITCHING CIRCUITS AND LOGIC DESIGN I

A continuation of the digital concepts covered in 17.371 and 17.372. Topics include Boolean function minimization; incompletely specified functions; tabular minimization techniques; multiple output circuits; error detecting and error correcting codes; sequential circuits. One session per week, 3 credits. Prerequisite: 17.372.

17.434 SWITCHING CIRCUITS AND LOGIC DESIGN II

A continuation of 17.433 including, clocked sequential circuits, state diagrams and tables; equivalent states; simplification of sequential machines; incompletely specified sequential circuits; pulse-mode circuits; fundamental mode sequential circuits; and threshold logic. One session per week, 3 credits. Prerequisite: 17.433.

17.453 TRANSMISSION THEORY I

Transmission systems, reactance, capacitance, three-phase line calculations, corona power, lighting arresters, transmission structures, transformer substations, distribution circuits, and automatic substations. One session per week, 3 credits. Prerequisite: 17.241 (may be taken concurrently).

17.454 TRANSMISSION THEORY II

A continuation of 17.453. One session per week, 3 credits. Prerequisite: 17.453.

17.469 CONTROL SYSTEMS II

A continuation of 17.350. Control loop design; real frequency and transient response; Nyquist stability criterion; compensation, optimum design; nonlinear systems; and a.c. carrier servomechanisms. One session per week, 3 credits. Prerequisite: 17.350.

17.480 MICROPROCESSORS

The hardware, software, and applications associated with several types of microprocessors will be investigated. One session per week, 3 credits. Prerequisite: 17.417.

17.484 PASCAL

Concepts of the PASCAL programming language including: standard data types, expressions, assignment, input-output, flow of control, procedures and functions, user defined data types, arrays, sets, records, files, and pointers. Well structured programs and modular design are emphasized. Data structures are introduced through applications. Students are required to run a substantial number of PASCAL programs. One session per week. 3 credits. Prerequisite: 17.381.

17.485 COMMUNICATION THEORY I

Introduction to information, transmission and communication systems. Review of four year Fourier Series, and Fourier Integrals, discussion of amplitude and frequency modulation systems. An introduction to noise in electrical systems. Prerequisite: 17.376.

17.486 COMMUNICATION THEORY II

A Continuation of Communication Theory I. Pulse amplitude modulation (PAM), pulse code modulation (PCM), and pulse position modulation (PPM) systems, will be discussed and analyzed. Propagation in free space, antenna theory and propagation characteristics of the ionosphere will be presented. Prerequisites: 17.485, 92.234.

17.487 FILTER DESIGN I

A review of network analysis. An introduction of synthesis, driving point impedance, approximation theory, and transfer function realization. One session per week, 3 credits. Prerequisites: 17.350, 92.234.

17.488 FILTER DESIGN II

An introduction to analysis and synthesis of active filters. Negative resistance, controlled sources, negative impedance converters and gyrators will be discussed. However, course emphasis will be on the operational amplifier as a network element. One session per week, 3 credits. Prerequisite: 17.487.

17.491 INTRODUCTORY MICROPROCESSOR LABORATORY

A laboratory based on the 6800 microprocessor. May be substituted for project laboratory "B" or "C". One session per week, 3 credits. Prerequisite project lab A, or 17.372.

17.493 PROJECT LABORATORY D

A continuation of Project Laboratory C (17.392), available as an EET technical elective, for students that desire laboratory experience in addition to the minimum required in the program. Software, as well as hardware projects are permissible. One session per week. 3 credits. Prerequisite: 17.392.

17.494 TELECOMMUNICATIONS ENGINEERING

Telephone channels systems objectives for human and machine interface. The switched telephone network hierarchy. Local channel performance, noise, echo, design loss and crosstalk. Frequency division multiplex systems. Time division Network design, topological considerations. Service availability, line usage and blocking. Facsimile, telex. Regulation of common carriers, tariffs. User applications including PABX system analysis. One session per week. 3 credits. Prerequisites: 17.225, 17.371.

17.497 BIOMEDICAL ELECTRONICS I

The first semester will include a brief review of circuit design techniques particularly applicable to biomedical electronics. Emphasis will be placed upon small signal, low noise amplifiers and signal processors. Frequency, power spectrum, shaping and filtering techniques necessary for biomedics will be presented from a designer's viewpoint. This material will be followed by the development of easily applied design algorithms for the most common circuit types found in biomedical instrumentation and systems. Both single and double ended circuit structures will be considered. Further, the design of the various types of analog and digital displays required in biomedical systems will be taught. The use of the most current device and system technology will be emphasized throughout the course. One session per week. 3 credits. Prerequisites: 17.350, 17.364, 84.121.

17.498 BIOMEDICAL ELECTRONICS II

Second semester work will consist of three component phases. The first phase will include a presentation of selected topics in anatomy and physiology. These are requisite to an in-depth understanding of the biomedical applications of the circuit and system design techniques presented during the first semester. The second phase will be focused on the use of the circuit design techniques of the first semester combined with the anatomical considerations of phase one in the design of the most commonly needed biomedical instrumentation devices. The educational focus during this phase will be at the equipment level. The third phase will focus on the system level considerations and will discuss the design of biomedical electronic systems. Intensive care unit operating suite systems are two examples of those to be discussed. Implementation and cross-professional acceptance problems will be discussed as time allows. One session per week. 3 credits. Prerequisite: 17.497.

17.499 ELECTRONIC RESEARCH TOPICS

This course is designed to permit a highly motivated student to pursue the study of technical topics, not presented in any of the available EET technical electives. The amount and level of the work associated with the course should approximate that of any other seventh or eighth year EET technical elective. A student desiring to take this course must present, to the program coordinator, a brief written proposal clearly indicating the technical area to be investigated. The student will be allowed to enroll in the course, if an available instructor is willing to monitor the students progress, and evaluate the results. It is suggested that a proposal be submitted prior to the tenth week of any semester to be considered for the following semester. One session per week. 3 credits. Prerequisite: Permission of Coordinator.

MECHANICAL ENGINEERING TECHNOLOGY

23.111 ENGINEERING DRAWING I

Class and laboratory. An introduction to graphical communication. Lectures and exercises on the presentation of data and shape description of mechanical solids. Topics include orthographic projection; isometric and oblique pictorials; sketching. One session per week, 3 credits.

23.112 ENGINEERING DRAWING II

Class and laboratory. Descriptive geometry of lines, points, and planes. Intersections; developments; dimensioning. One session per week, 3 credits. Prerequisite: 23.111.

23.113 MACHINE DRAWING

Class and laboratory. Drawing of a machine from layout through details to final assembly, including drawing of cams, gears, fasteners, welding, and piping. Positional and geometric tolerancing. One session per week, 3 credits. Prerequisites: 23.112.

23.201 MECHANICAL TECHNOLOGY LABORATORY I (Machine Tool)

Modern methods of manufacturing, production, inspection, and measurements of metals and metal fabrications. One session per week, 3 credits.

23.202 MECHANICAL TECHNOLOGY LABORATORY II (Thermal Fluids)

Fundamentals of engineering measurements, flow measurement of steam and air, tests of steam turbines and internal-combustion engines, experimental work with refrigeration units, measurements of heat transfer, combustion, fluid flow, and performance of pumps. One session per week, 3 credits. Prerequisites: 23.243, (may be taken concurrently); 23.242.

23.221 APPLIED MECHANICS I (Statics)

The fundamentals of statics, including such topics as force systems, resultants, equilibrium, friction, first moments of masses and areas. One session per week, 3 credits. Prerequisites: 90.131, 95.141.

23.222 APPLIED MECHANICS II (Dynamics)

Laws of kinematics of particles and rigid bodies involving absolute and relative motion. Newton's laws as applied to the kinetics of rigid bodies in motion. Principles of work and energy; impulse and momentum. One session per week, 3 credits. Prerequisites: 90.132, 23.221.

23.223 STRENGTH OF MATERIALS

Principles of strength of materials, centric, torsional, and flexural loading, principal stresses, Mohr's stress circle, strain, temperature effects, shear and moment diagrams. One session per week, 3 credits. Prerequisites: 90.132, 23.221.

23.231 MECHANISMS

Class and laboratory. The principles of kinematics. Topics covered are rolling cylinders and cones, gearing, gear train design, epicyclic gear train design, flexible connectors including stepped pulley and cone design, cam design, linkages, velocity and acceleration diagrams and miscellaneous mechanisms. One session per week, 3 credits. Prerequisite: 99.142.

23.232 MACHINE DESIGN

Class and laboratory. Application of theories of failure and mechanics of materials to the analysis and design of typical machine elements such as shafts, springs, screws, belts, pulleys, keys, and gears. Problems assigned also illustrate synthesis of ideas applied to design. One session per week, 3 credits. Prerequisite: 23.223.

23.241 ELEMENTS OF THERMODYNAMICS I

The thermodynamic system; heat, work; the first and second laws. Properties of vapors and gases.

Perfect gas laws. The use of tables and charts. One session per week, 3 credits. Prerequisites: 90.132, 99.143.

23.242 APPLIED FLUID MECHANICS

Properties of fluids, statics of fluids, fluid flow kinematics, momentum, energy conversion, viscosity, flow of real fluids in pipes, ducts and channels, compressible flow. Fluid couplings and torque converters. Flow measurement and fluid machinery. One session per week, 3 credits. Prerequisite: 23.222.

23.243 ELEMENTS OF THERMODYNAMICS II

The application of thermodynamic principles. Vapor and gas cycles, refrigeration, energy conversion machinery, mixtures, availability and irreversibility. One session per week, 3 credits. Prerequisites: 23.241.

23.303 MECHANICAL TECHNOLOGY LABORATORY III (Materials)

Experimental study of heat treating of metals, metallography, fatigue and creep. Limitations of the formulas derived in Strength of Materials are investigated through laboratory projects. One session per week, 3 credits. Prerequisites: 23.223, 23.352.

23.352 PROPERTIES OF MATERIALS

The mechanical, electrical, thermal, chemical and magnetic properties of engineering materials and how these properties depend on crystal structure and atomic arrangement. Methods of altering the structure of materials to obtain desired properties. One session per week, 3 credits. Prerequisite: 99.143.

23.354 PROBLEMS IN MECHANICAL ENGINEERING TECHNOLOGY

Class and laboratory. A review and extension of applied mechanics. Assigned problems in statics, dynamics, strength of materials and machine design. Introduction to digital computer programming. One session per week, 3 credits. Prerequisites: 23.222, 23.223.

23.404 MECHANICAL TECHNOLOGY LABORATORY IV (Manufacturing)

Class and laboratory experience with tape controlled machine tools. Topics include basic drawings, linear and circular interpolations for two and more axis machines including the lathe. Writing and preparing manuscript and tape for machine control on both the absolute and incremental system. (It is recommended that this subject be taken during the Fall semester of the student's last year so that preliminary activities associated with 23.405 - Project Lab generally taken during Spring semester of final year - can be incorporated). One session per week, 3 credits. Prerequisites: 90.115, 23.112.

23.405 MECHANICAL TECHNOLOGY LABORATORY V (Project)

The application of the student's engineering training to a practical engineering problem. Engineering experience is gained through planning, executing, and reporting on a project approved by staff advisor. Work may be individual or team effort, depending upon degree of complexity of project. "Credit for this subject may be granted for equivalent industrial experience. Contact area coordinator for approval." One session per week, 3 credits. Prerequisite: 23.404.

23.455 THERMODYNAMICS AND HEAT TRANSFER

An investigation of the basic laws of thermodynamics with primary emphasis on heat transfer by conduction, radiation, and convection. Also considered will be the heat transfer problems associated with microelectronics and other high density electronic packaging operations. One session per week, 3 credits. Prerequisites: 90.132, 99.142.

23.471 STRENGTH OF MATERIALS II

Various topics include shear center, unsymmetrical bending, energy methods, unit dummy load method, failure theories. One session per week, 3 credits. Prerequisites: 90.232, 23.223.

23.472 APPLIED DYNAMICS

Statics and dynamics as applied to general systems with oscillatory motion. The kinematics of periodic motion and the vibrations of systems with single degree of freedom. One session per week, 3 credits. Prerequisites: 90.232, 23.222, 23.223.

23.473 MACHINE DESIGN II

Class and laboratory. Advanced problems in design of machine elements. One session per week, 3 credits. Prerequisite: 23.232.

23.475 HEAT TRANSFER

Class and laboratory. Theory and application of heat conduction in solids. Radiation of heat and application to problems arising in practice. One session per week, 3 credits. Prerequisites: 92.234, 23.243, 23.242.

23.476 NON-DESTRUCTIVE TESTING

Class and laboratory. The non-destructive evaluation of materials and processes by sonic, magnetic, thermal, and electrical radiations. One session per week, 3 credits. Prerequisites: 90.232, 99.143.

23.477 EXPERIMENTAL STRESS ANALYSIS

Class and laboratory. The determination of stresses in complex structures by experimental techniques. Photoelasticity, birefringent coatings, brittle lacquer method, analogies, and mechanical and electrical resistance strain gauges. One session per week, 3 credits. Prerequisites: 90.232, 23.223.

23.478 AERODYNAMICS

Fundamentals of subsonic aerodynamics. Atmosphere models. Airfoil data including Mach number and Reynolds number effects. Circulation, downwash, and three dimensional wing theory. Life and drag of aircraft components. Power curves, and an introduction to aircraft performance calculations. One session per week, 3 credits. Prerequisite: 23.242.

INDUSTRIAL TECHNOLOGY

20.107 INTRODUCTION TO ENGINEERING DESIGN

A course to introduce students to industrial practice in design graphics. Topics include graphs, orthographic projection, sectioning, limit dimensioning, gear trains, cams and fasteners. A mechanical design problem completes the semester's work. One session per week, 3 credits.

20.109 ENGINEERING DESIGN LABORATORY

A laboratory course to provide the practical experience and application of the theory and techniques of 20.107 to actual industrial design case studies. One session per week, 3 credits. Corequisite: 20.107.

20.151 HYDRAULICS FOR PLANT OPERATORS

Topics include fluid properties, pressure, flow through pipes, fittings and channels, flow measuring instruments, pumping. One session per week, 3 credits.

20.152 WATER BIOLOGY

An introduction to the biology of natural waters. Topics include freshwater animals, plants, community relationships, population dynamics, effect of pollution, water borne disease. Includes some lab and field work. One session per week, 3 credits.

20.225 WATER CHEMISTRY

A practical introduction to the chemistry of natural waters, emphasizing chemical equilibria. Topics also include basic concepts of chemistry, solution computations, water quality criteria, water analyses, and conventional water treatment processes. One session per week, 3 credits.

20.251 WASTEWATER TREATMENT PLANT OPERATIONS I

Course is geared to the assumption that students are not familiar with plant operations. Lectures begin on preliminary treatment and proceed through primary and various types of secondary treatment with emphasis on activated sludge, chlorination, and sludge dewatering and ultimate disposal. The primary emphasis is on the conventional activated sludge process. One session per week, 3 credits.

20.252 WASTEWATER TREATMENT PLANT OPERATIONS II

This course is available for those who have taken 20.221, or for plant operators experienced in biological treatment. Control of the activated sludge process is emphasized, based upon solids balancing, using the centrifuge and settleometer. This technique has been developed by Al West of EPA. In addition, industrial wastes and advanced wastewater treatment are covered, including the removal of phosphates and nitrates. One session per week, 3 credits. Prerequisite: 20.251.

20.253 WASTEWATER TREATMENT LAB. I

An introductory course teaching the basic laboratory techniques and procedures used to operate and monitor conventional wastewater treatment facilities. Included are solids, chlorine residual, pH, BOD, total coliform, alkalinity, acidity, sludge, and microscope analysis. One session per week, 3 credits. Corequisite: 20.251.

20.254 WASTEWATER TREATMENT LAB II

An advanced course designed to teach the lab techniques and procedures used to operate and monitor advanced wastewater treatment facilities. Included are "West" method, nitrification, phosphorous, jar test, COD, BOD, TOC, total coliform, turbidity, and chloride analysis. One session per week, 3 credits. Prerequisites: 20.251, 20.253.

20.255 WATER DISTRIBUTION SYSTEMS

This course will cover the operation and maintenance of drinking water distribution systems including pipes, valves, pumping, storage, corrosion control, water hammer, flushing, construction, hydraulics, and system analysis. One session per week, 3 credits.

20.301 MODERN MATERIALS

This course is a continuation of the study of materials. It covers the third general classification of engineering materials, ceramics, and the structural potpourri of all engineering materials, composites. The study of ceramics will stress the way these properties enter into the selection of ceramic materials for industrial applications. The study of composites will serve as a review of all joining processes used in manufacturing. One session per week, 3 credits. Prerequisite: 20.201.

20.306 SEMINAR I

A seminar course of industrial technology juniors actively pursuing an industrial internship program. One session per week, 3 credits.

20.307 FLUID POWER CONTROLS

Laboratory experiences and lectures on the elements of hydraulic and pneumatic power systems, and the automatic control of these systems. Systems elements studied are actuators, valves, power sources and accessories. Control systems studied are pneumatic, electronic and fluidic logic. Electrical solenoid and relay control circuits are designed. One session per week, 3 credits.

20.311 MODERN MANUFACTURING PROCESSES

Students participating in this course will gain both a theoretical and a practical understanding of modern manufacturing processes. These include numerical control machining, preparation of N.C. Tapes, electric discharge machines, casting, fastening methods, and assembly techniques. Product design as related to manufacturing will be considered. One session per week, 3 credits. Prerequisite: 23.201.

20.350 METHOD-TIME ANALYSIS

Methods improvement and work measurement techniques, including principles of motion economy, work simplification, process and operator charts, work sampling and time standards. One session per week, 3 credits.

20.351 WATER SUPPLY AND TREATMENT OPERATIONS I—Basic

An introduction to the principles and practices in the operation and maintenance of drinking water supply and treatment facilities, including these topics: sources; contaminants; regulations; control of color, taste, odor, corrosion, iron and other contaminants; treatment processes such as coagulation, sedimentation, filtration, carbon absorption, oxidation, disinfection, softening, fluoridation; etc. One session per week, 3 credits.

20.352 WATER SUPPLY AND TREATMENT OPERATIONS II—Advanced

A detailed study of actual problems and solutions in drinking water quality and treatment, including topics such as: treatment for color, taste, odor; corrosion problems; hazardous waste contamination; controlling outbreaks of water borne disease; converting to advanced technology such as ozonation and carbon absorption; dealing with water shortages; etc. Actual case histories will be used and students are invited to discuss their systems' problems. Prerequisite: 20.351 or familiarity with basic water supply and treatment concepts. One session per week, 3 credits.

20.354 INDUSTRIAL WASTE TREATMENT

An introductory approach to the design, operation, and control of the major types of industrial waste treatment processes. Including among others waste treatments of the following industries: Textile, food processing, wood fiber, metals, chemical and energy. This course will include basic lab work to include pH, alkalinity, acidity Cl_2 , and solids. One session per week, 3 credits.

20.402 MANUFACTURING OPERATIONS

This course is organized so that students can design the manufacturing process and fabricate a product for small quantity production. Accompanying lectures cover pertinent subject areas such as: forecasting, plant layout, materials handling, pert/cost, product evaluation and equipment selection. Several plant trips and outside speakers are usually scheduled. One session per week, 3 credits. Prerequisites: 23.231, 17.127.

20.403 SEMINAR II

A seminar course for I-T seniors actively pursuing an industrial internship program. One session per week, 3 credits.

20.406 SEMINAR III

A seminar course for I-T seniors actively pursuing an industrial internship program. One session per week, 3 credits.

20.408 INSTRUMENTATION & PROCESS CONTROL

An introduction to process control system technology. Liquid level, rate of flow, pressure and temperature measuring devices and their characteristics. R-C of system components. Integral, dead-time and first order lag processes. Control modes. Bode diagrams and frequency response. One session per week, 3 credits. Prerequisite: 17.127.

20.410 INSTRUMENTATION AND PROCESS CONTROL LABORATORY

A laboratory course to supplement the theory studied in 20.408. Various mechanisms used in industrial processes and their controls will be assembled and varied to accomplish the task required by practical problems. Equipment will also be built to automated control of processes. One session per week, 3 credits. Corequisite: 20.408.

20.414 INDUSTRIAL ECONOMIC MANAGEMENT

Analysis of available alternatives in equipment, plant and materials purchasing or leasing. Economic feasibility analysis of industrial projects including depreciation techniques, break-even analysis, benefit-cost techniques, replacement, present worth and rate of return analysis. One session per week, 3 credits.

20.452 TREATMENT PLANT EQUIPMENT OPERATIONS

Offers a practical operational and maintenance approach to the major water and wastewater treatment plant equipment. Including mechanical bar screens, degritting equipment, pumps, motors, sedimentation tanks, diffusers, mechanical aerator, rapid sand filters, chlorinators, sludge dewatering equipment, electrical control panels. Will include field trips with on-site demonstration. One session per week, 3 credits. Prerequisites: 20.251, 20.252, 20.351.

20.456 STREAM SURVEY AND ANALYSIS

Includes lectures, lab, and field work. Introduction to sampling equipment, sampling techniques, site selection: data collection and evaluation. One session per week, 3 credits. Prerequisites: 20.154, 20.253, 20.254.

20.457 ADVANCED WATER AND WASTEWATER LABORATORY

Includes some of the most modern instrumental techniques for water and wastewater analysis including A.A., TOC, and gas chromatography. Also includes laboratory quality control with special emphasis on laboratory certification. One session per week, 3 credits. Prerequisites: 20.253 and 20.254.

20.458 BIOLOGICAL TREATMENT PROCESS CONTROL AND TROUBLESHOOTING

Emphasis on optimizing the operation of wastewater treatment plants. Includes the latest operational techniques and the use of process controls modifications. Also includes laboratory work, special projects, group discussions and field visitation. One session per week, 3 credits. Prerequisites: 20.251, 20.252, 20.253, 20.254.

20.476 STATISTICAL QUALITY CONTROL

A study of the statistical and administrative techniques relative to the maintenance of product quality at defined levels. Sampling plans for variables and attributes are considered from the viewpoint of consumer-vendor relationships and economics. One session per week, 3 credits. Prerequisite: 92.383.

PLASTICS

27.201 PLASTICS MATERIALS SCIENCE I

Class and laboratory. The history, classification, definitions, raw materials, methods of manufacture, properties and uses of polymeric materials with emphasis on the engineering plastics. Laboratory sessions and demonstrations as scheduled by the instructor. One session per week, 3 credits.

27.202 PLASTICS MATERIALS SCIENCE II

Class and laboratory. A continuation of 27.201 with special emphasis on fillers and reinforcements, modifiers, additives and other ingredients that go into making typical plastics molding compounds. Introduction to laminates and reinforced plastics, film and sheeting, as well as adhesives, and miscellaneous resins are surveyed. Laboratory sessions and demonstrations as scheduled by the instructor. One session per week, 3 credits. Prerequisite: 27.201.

27.301 ADDITIVES FOR POLYMERIC MATERIALS

Analysis of additives including stabilizers, plasticizers, fillers and reinforcements, biocides, flame retardants, antistatic agents, and release agents. Special emphasis on the characteristics of each type of additive, compatibility interactions, and effects on processing. Review of the most current methods of testing efficiency of each additive system. One session per week, 3 credits.

27.303 REINFORCED PLASTICS COMPOSITES

Review of composites as a class of materials and the mechanical physical characteristics. Fundamental concepts underlying these properties with particular emphasis on fibrous reinforced plastics. Survey of matrices, reinforcements, and methods of fabrication. One session per week, 3 credits. Prerequisite: 27.202.

27.373 PLASTICS MOLD ENGINEERING I

Class and laboratory. Introduction to the principles of basic mold and die design and construction. Laboratory design of molds and/or dies to be constructed in continuing portions of this course. Lecture, laboratory and demonstrations at the discretion of the instructor. One session per week, 3 credits. Prerequisite: 27.401.

27.376 MOLD ENGINEERING II

(Continuing of 27.373 which is a prerequisite.) One session per week, 3 credits.

27.401 PROCESSING TECHNOLOGY I

Class and laboratory. Theory and methods of processing plastics materials including compounding, molding, extruding and thermoforming. Evaluation and development of typical problems. Laboratory sessions and demonstrations as scheduled by the instructor. One session per week, 3 credits. Prerequisite: 27.202.

27.402 PROCESSING TECHNOLOGY II

Class and laboratory. A continuation of 27.401 which touches extensively upon casting, laminating, fabricating, and finishing. Correlation of composition, processing and fabricating with product design and applications is also covered. Laboratory sessions and demonstrations as scheduled by the instructor. One session per week, 3 credits. Prerequisite: 27.401.

27.403 PHYSICAL PROPERTIES OF POLYMERS I

Introduction to basic mechanical properties of polymers as linear viscoelastic materials. Concepts of creep, stress relaxation, and superposition principles emphasized. Dynamic mechanical behavior, interrelations between various properties, electrical behavior, miscellaneous mechanical properties, optical properties. Prerequisite: senior status.

27.404 PHYSICAL PROPERTIES OF POLYMERS II

A continuation of 27.403.

27.405 POLYMER CHARACTERIZATION

Instrumental methods of characterizing plastics materials. The theory and interpretation of infrared spectroscopy, gas chromatography, gel permeation chromatography, differential thermal analysis, thermal gravimetric analysis, osmometry, etc. The determinations will include elucidation of structure, identification, molecular weight, molecular weight distribution and glass transition temperatures. One session per week, 3 credits. Prerequisite: 84.126, permission of instructor.

27.406 POLYMER STRUCTURE

The fundamental relationship between molecular structure, properties and end-use applications of plastics materials will be explored in detail. Molecular structural features include chemical composition, molecular size and flexibility, intermolecular order and binding, and supermolecular structure. Properties include processability, mechanical, acoustic, thermal, electrical, optical and chemical properties price, and balance of properties. Applications include rigid solids, flexible solids, foams, film, and non-plastic applications. Prerequisite: permission of instructor.

27.407 PLASTICS INDUSTRY ORGANIZATION

Economics of producing plastics raw materials and converting them into end products, from research and development to plant construction, operation, and marketing. Market analysis of plastics production, processing, and consumer patterns; commercial development, sales, and technical service. Organization of the plastics industry for research and development, specialty and commodity production, profit and growth. Prerequisite: permission of instructor.

27.451 SELECTED TOPICS IN POLYMERS I

Specialized topics in applied polymer science, adhesives, elastomers, coatings, and fibers as well as other timely subjects. One session per week, 3 credits. Prerequisite: permission of instructor.

27.452 SELECTED TOPICS IN POLYMERS II

(Continuation of 27.451 which is a prerequisite, also permission of the instructor). One session per week, 3 credits.

CLINICAL LABORATORY SCIENCES

35.101 ANATOMY & PHYSIOLOGY I

An introduction to the study of the human organism relating structure and function. Among the topics treated are cytology, histology, the skeletal system, the muscular system, the nervous system and circulatory system. The course is designed to provide students with a working knowledge of human anatomy and physiology through an understanding of the fundamental principles involved in the structures and functions of the body, through interrelationships and through feedback mechanisms. Clinical applications will be presented. One session per week, 3 credits. Corequisite: 35.103.

35.102 ANATOMY & PHYSIOLOGY II

A continuation of the study of the human organism relating structure and function. Among the topics treated are the circulatory, respiratory, digestive, excretory, endocrine and reproductive systems of man. The course is designed to provide students with a working knowledge of human anatomy and physiology through an understanding of the fundamental principles involved in the structures and functions of the body, through interrelationships and through feedback mechanisms. Clinical applications will be presented. One session per week, 3 credits. Prerequisites: 35.101; 35.103. Corequisite: 35.104.

35.103 ANATOMY AND PHYSIOLOGY LABORATORY I

The laboratories are designed to reinforce didactic material by practical exposure to the subject matter. A second major outcome will be an understanding of laboratory methodology—viz. a thoughtful approach to problems, precise procedures and an appreciation of variables. One session per week, 3 hours, 1 credit. Corequisite: 35.101.

35.104 ANATOMY & PHYSIOLOGY LABORATORY II

The laboratories are designed to reinforce didactic material by practical exposure to the subject matter. A second major outcome will be an understanding of laboratory methodology—viz. a thoughtful approach to problems, precise procedures and an appreciation of variables. One session per week, 3 hours, 1 credit. Prerequisites: 35.101; 35.103. Corequisite: 35.102.

35.211 BASIC CLINICAL MICROBIOLOGY AND PATHOLOGY

The course is designed to study the fundamentals of microbiology with major emphasis on the structure and function, growth and metabolism and classification of clinically important microorganisms; the origin and mechanism by which microorganisms produce disease; the human body's response to invading microbes; an introduction to the ecological aspects of microorganisms in the environment with particular stress on their significance, activities (beneficial and detrimental) and control measures. One session per week, 3 credits. Prerequisites: 35.103; 35.104. Corequisite: 35.213.

35.213 BASIC CLINICAL MICROBIOLOGY AND PATHOLOGY LABORATORY

Laboratory investigations of basic properties and characteristics of microorganisms; the student will perform commonly used techniques for collecting, handling and studying clinically important microorganisms. One session per week, 3 hours, 1 credit. Prerequisite: 35.103; 35.104. Corequisite: 35.211.

35.251 PHYSIOLOGICAL SCIENCE I

An amplification of the principles of physiology at the molecular level. Basic concepts of chemistry and biochemistry are integrated within a physiological framework and are exemplified with clinically relevant concepts. Introductory principles of general and organic chemistry are surveyed. Radioisotopes and their clinical and medical uses are discussed. Fluid, acid-base and electrolyte balance are among the topics studied, emphasizing chemical mechanisms and clinical evaluations based on laboratory values. Selected aspects of enzymes, mineral metabolism, lipids and lipid metabolism are discussed at the molecular level with emphasis on clinical and diagnostic applications. Within each major unit, clinical case studies are presented as an integral part of the subject matter. One session per week, 3 credits. Prerequisites: 35.101, 35.102. Corequisite: 35.253 or 35.255.

35.252 PHYSIOLOGICAL SCIENCE II

Carbohydrates, proteins, nucleic acids and their corresponding metabolic cycles and pathways are studied on a molecular level. Continued emphasis is placed on clinically relevant principles, pathological conditions relating to metabolic disorders and the evaluation of case studies. The chemistry and biochemistry of kidney and liver function tests are discussed with their use in clinical assessment. The major vitamins and hormones are examined, with their effects on biochemical reactions, and their relation to selected pathological conditions concerned with metabolism. One session per week, 3 credits. Prerequisite: 35.251. Corequisite: 35.254 or 35.256.

35.253 PHYSIOLOGICAL SCIENCE I LABORATORY

This course is designed to augment basic principles studied in 35.251. The laboratory exercises encompass Acids, Bases, Buffers, Introduction to Organic Compounds, Colloids, Dialysis, Donnan Equilibrium, Paper and Thin Layer Chromatography, Routine Urine/Urine Sediment Examination; Determination of Urinary Chloride, Calcium and Phosphate, Qualitative Properties of Enzymes, Determination of Serum Amylase, Properties of Lipids. One session per week, 3 hours, 1 credit. Corequisite: 35.251.

35.254 PHYSIOLOGICAL SCIENCE II LABORATORY

This course is designed to augment basic principles studied in 35.252. Laboratory exercises include Properties of Carbohydrates; Proteins, Nucleic Acids, Determination of Blood Glucose, Ethanol, Serum Protein, Electrophoresis, Determination of Urine Creatine, Creatinine, Sodium, Analysis of Direct/Indirect Bilirubin, Urobilinogen, Vitamins. One session per week, 3 hours, 1 credit. Prerequisites: 35.253 or 35.255. Corequisite: 35.252.

35.335 INTRODUCTION TO MEDICAL AND CLINICAL GENETICS

A course designed to exemplify the pathological and clinical aspects of genetics. Background material includes an introduction to cellular and molecular genetics, and the metabolic basis of inherited diseases. Immunogenetics, pathological genetics, the influence of chromosome variations on disease conditions, the care and treatment of genetically-based diseases, and the application of genetic precepts to the clinical laboratory will be discussed. The student will learn the psychology, sociology, and biology of genetic counseling and learn to apply these principles to everyday situations. The legal implications of genetic decisions will also be discussed in light of recent experimentation being done on the genetic alteration of pharmacological responses, recombination, cloning, and other forms of genetic engineering. One session per week, 3 credits. Prerequisites: 35.101, 35.102.

35.337 MEDICAL AND CLINICAL GENETICS LABORATORY

The laboratory illustrates the principles studied in 35.335, with emphasis on immunogenetics, metabolism, and genetic counseling. Case histories and their application will be an integral part of this laboratory. One session per week, 2 hours, 1 credit.

35.356 PHARMACOLOGY

Physical and Chemical relationships underlying drug action, dosage and response by tissue systems, kinetics of drug action. Evaluation of mechanisms of action, incompatibility, toxic effects and modern drug usage in man. Major topics covered will be General and Local Anesthetics, Antihistamines, Central Nervous Stimulants and Depressants, Chemotherapy, Immunopharmacology, Respiratory and Gastrointestinal Drugs. Additional new topics from the current literature will be discussed. Useful applications of drug interaction and commercial preparations will be included. Prerequisite: 35-252 (or equivalent). Frechette.

MEDICAL TECHNOLOGY

36.311 MEDICAL MICROBIOLOGY I

A study of the cultural, biochemical, serological and pathogenic characteristics of disease microorganisms. Emphasis will be placed on the pathophysiology of the infectious diseases and its relationship to isolation and identification of the pathogenic microorganisms. One session per week, 3 credits. Prerequisites: 35.211, 35.213. Corequisite: 36.313.

36.313 MEDICAL MICROBIOLOGY LABORATORY I

This course is designed to introduce the student to pathogenic microorganisms, media and techniques used in the identification of these organisms. Emphasis will be based on the isolation, identification and differentiation of pathogenic microorganisms common to man. In addition, quality control and antimicrobial susceptibility testing will be covered. One session per week, 6 hours, 2 credits. Corequisite: 35.311.

36.321 CLINICAL HEMATOLOGY I

A study of the human hematopoietic system and its relationship to other organ systems. Discussions will include morphological and biochemical relationship of erythropoiesis and leukopoiesis in health and disease states. A study of the mechanics and relationship of blood coagulation as it pertains to health and disease states will also be included. One session per week, 3 credits. Prerequisites: 35.251, 35.252. Corequisite: 36.323.

36.323 CLINICAL HEMATOLOGY LABORATORY I

Emphasis will be placed on current hematologic tests and coagulations used in today's clinical laboratory. In addition, the clinical implications of these tests to diagnose, monitor and evaluate various health and diseased processes will be discussed. One session per week, 6 hours, 2 credits. Corequisite: 36.321.

36.331 IMMUNOLOGY—IMMUNOHEMATOLOGY

A general introduction to the principles of immunology including: definition of antigens and antibodies; description of cellular events and the immune response; theories of antibody formation; hypersensitivity states; and diseases associated with altered responsiveness of the immune system. Current concepts and blood transfusion technology including discussions of the chemical nature and immunological interactions of blood group substances. Included is the discussion of the genetic distribution of blood isoantigens. One session per week, 3 credits. Prerequisites: 36.311, 36.313. Corequisite: 36.333.

36.333 IMMUNOLOGY—IMMUNOHEMATOLOGY LABORATORY

A study of the antibody-antigen reactions and the use of current techniques employed for their assay. Discussions of the immunological responses of the host-infectious agent interaction and their demonstration via techniques such as precipitation, agglutination, complement fixations. One session per week, 6 hours, 2 credits.

36.341 FUNDAMENTALS OF CLINICAL CHEMISTRY

To include selected topics in inorganic chemistry, laboratory mathematics, statistics and quality control. The remainder of the course will deal with the principles that govern the properties, reactions, isolation and identification of organic compounds. One session per week, 3 credits. Prerequisites: 35.251, 35.252. Corequisite: 36.343.

36.343 FUNDAMENTALS OF CLINICAL CHEMISTRY LABORATORY

Laboratory consists of organic synthesis, separation of mixtures according to solubility and functional groups and identification by crystallization, through layer chromatography, gas phase chromatography and identification of compounds on the basis of physical properties including spectra. One session per week, 6 hours, 2 credits. Prerequisites: 35.253, 35.254. Corequisite: 36.341.

36.350 HUMAN BIOCHEMISTRY

An in depth study of biochemical substances and other reactions in the human body. Emphasis will be placed on metabolism of cells, tissues and organs. Those biochemical processes which underlie pathological conditions will be emphasized. One session per week, 3 credits. Prerequisites: 36.341, 36.343.

36.351 CLINICAL BIOCHEMISTRY I

This course deals with the methodology and interpretation of results in the following areas: Carbohydrates, Enzymes, Proteins, Non-protein, Nitrogen Compounds, porphyrins and Lipids. One session per week, 3 credits. Prerequisites: 36.341, 36.343, 36.350, 36.361. Corequisite: 36.353.

36.353 CLINICAL BIOCHEMISTRY LABORATORY I

This course is designed to introduce clinical laboratory procedures in the following areas: Carbohydrates, Proteins, Non-protein Nitrogen Compounds, porphyrins and Lipids. Methods of troubleshooting, calibration and quality control will be emphasized. One session per week, 6 hours, 2 credits. Prerequisites: 36.341 and 36.343. Corequisite: 36.351.

36.361 MEDICAL INSTRUMENTATION

This course includes discussions of the theoretical concepts, design, function and practical aspects of troubleshooting of: UV-VIS Spectrophotometers; Fluorescence Techniques; Flame Emission Spectroscopy; Atomic Absorption Spectrophotometry; IR Spectroscopy; Reference, pH and Ion Selective Electrodes; pH Meters, Chloridometers; Paper Thin Layer, Column, and Gas Chromatography; Servo Devices and Scintillation Counters. One session per week, 3 credits. Corequisite: 36.363 (restricted to Medical Technology Students).

36.363 MEDICAL INSTRUMENTATION LABORATORY

Laboratory exercises are performed to acquaint the student with the design, operation, application and troubleshooting of laboratory instrumentation, especially those used in the clinical laboratory. The following topics are studied: Basic aspects of electronics; UV-VIS spectroscopy; infra red spectrophotometry; flame photometry; atomic absorption spectrophotometry; fluorometry; pH meters; ion specific electrodes; potentiometry; column and gas chromatography. A special research project in the area of laboratory instrumentation is required. One session per week, 4 hours, 2 credits. Corequisite: 36.361.

36.410 CLINICAL MICROBIOLOGY PRACTICUM

Supervised clinical training in a consortial hospital clinical laboratory. Designed to reinforce knowledge and skills gained in lecture and laboratory and at the same time introduce the student to the daily activities of the clinical microbiology laboratory. Emphasis will be placed on quality control, methodology and clinical interpretation. One session per week 6 hours, 2 credits. Prerequisites: 36.311, 36.313.

36.411 ADVANCED MEDICAL MICROBIOLOGY

Intensive Study of classification, morphology, physiology, genetics and ecology of medically important fungi, parasites and viruses. Emphasis on epidemiology, pathogenicity and host defense. One session per week, 3 credits. Prerequisites: 36.311, 36.313. Corequisite: 36.413.

36.413 ADVANCED MEDICAL MICROBIOLOGY LABORATORY

the laboratory is designed to emphasize principles and procedures used in the isolation, cultivation, and identification of medically important fungi and parasites. One session per week, 3 hours, 2 credits. Corequisite: 36.411.

36.420 CLINICAL HEMATOLOGY PRACTICUM

Supervised clinical training in a consortial hospital clinical laboratory. Designed to reinforce knowledge and skills gained in lecture and laboratory and at the same time introduce the student to the daily activities of a clinical hematology laboratory. Emphasis will be placed on quality control, methodology and clinical interpretation. One session per week, 6 hours, 2 credits. Prerequisites: 36.321; 36.323.

36.430 CLINICAL IMMUNOHEMATOLOGY PRACTICUM

Supervised clinical training in a consortial hospital clinical laboratory. Designed to reinforce knowledge and skills gained in lecture and laboratory and at the same time introduce the student to the daily activities of the clinical immunohematology laboratory. Emphasis will be placed on quality control, methodology and clinical interpretation. One session per week, 6 hours, 2 credits. Prerequisites: 36.331, 36.332, 36.333, 36.334.

36.450 CLINICAL BIOCHEMISTRY PRACTICUM

Supervised clinical training in a consortial hospital clinical laboratory. Designed to reinforce knowledge and skills gained in lecture and laboratory and at the same time introduce the student to the daily activities of the clinical biochemistry laboratory. Emphasis will be placed on quality control, methodology and clinical interpretation. One session per week, 6 hours, 2 credits. Prerequisites: 36.452.

36.452 CLINICAL BIOCHEMISTRY II

Topics include methodologies and clinical correlations in the area of: Urinalysis, Acid Base Balance, Electrolytes, Hormones, Toxicology, Vitamins, Gastric Analysis, Amniotic Fluid and Biochemical Profiles. One session per week, 3 credits. Prerequisites: 36.351, 36.353. Corequisites: 36.454.

36.453 PROFESSIONAL ASPECTS OF MEDICAL TECHNOLOGY

This course is designed to introduce Senior Medical Technology students to those aspects of the profession which deal directly with or indirectly influence their status as professionals. Topics dealing with professional registration, certification and licensure; medical-legal implications and applications of the profession; and professional and medical-ethical aspects will be explored. (Restricted to Medical Technology Seniors.) One session per week, 3 credits.

36.454 CLINICAL BIOCHEMISTRY LABORATORY II

This course is designed to instruct the student in the analytical procedures and methods currently used in the clinical laboratory. This course is a continuation of 36.353. Manual and automated methods utilized in the assessment of such topics as Acid Base Balance, Hormones, Toxicology and Vitamins will be introduced. Additionally, methods associated with the routine examinations of urine will be introduced. Quality control, laboratory safety and professional performance is emphasized. One session per week, 6 hours, 2 credits. Prerequisites: 36.353. Corequisite: 36.452.

36.461 AUTOMATION

This course is designed to acquaint the student with current theories and methods of automated instrumental analysis as it currently applies to the clinical laboratory. Course work will include the assembly, maintenance, calibration, and quality control of such instrumentation as well as a term project designed to adapt instrumental analysis to automated methodologies. Lectures and laboratory. One session per week, 4 hours, 2 credits. Prerequisites: 36.454.

36.473 MEDICAL TECHNOLOGY SEMINAR

This course is designed to introduce Senior Medical Technology students to the areas of education, laboratory management and research and development. It is anticipated that through this course he will be motivated to pursue his interests in each of or any of these areas. Student participation is an integral part of the seminar. (Restricted to Medical Technology Seniors.) One session per week, 3 credits.

NURSING

30.202 COMMUNITY HEALTH

Emphasizes the concepts, philosophy and principles of public health and the relationship to the physical, mental and social well-being of the community, its individuals, families and groups. The focus is on the prevention of disease, the promotion and maintenance of health and the provision of environmental and personal health services through organized community effort.

33.202 BASIC PRINCIPLES FOR NURSING PRACTICE

This course introduces the student to the basic principles of nursing. Lecture and laboratory methods will be utilized to develop basic perceptual motor and communication skills. Nursing principles will be applied in simulated or clinical experiences. Members of the Department.

33.301 NURSING SCIENCE I: LECTURE

The students are introduced to the profession of nursing, its practice, its role, its legal responsibilities and its relationships with other health disciplines. The nursing process is taught as a model for delivery of professional nursing care, with emphasis on the phase of assessment. An overview of wellness throughout the life cycle is presented. Prerequisites: 33.202 and completion of mandatory core program. Members of the Department.

33.302 NURSING SCIENCE I: BASIC CLINICAL MODULE

Each student spends two days a week for one-half semester in a medical-surgical setting in order to develop nursing skills. The student assesses the patient's position on the health-illness continuum. Under faculty guidance, the student interviews selected patients and develops a plan to meet the identified health needs. Implementation and evaluation of this nursing care plan is carried out according to the student's level of development. Members of the Department.

33.303 NURSING SCIENCE I: MATERNAL CHILD HEALTH CLINICAL MODULE

For the purpose of assessing health care needs and planning nursing care, each student spends two days a week for one-half semester with well children and families in a variety of settings. Members of the Department.

33.304 NURSING SCIENCE I: PSYCHOSOCIAL ASSESSMENT

This course includes identification and exploration of the behavioral concepts that underlie the practice of professional nursing. Emphasis is on developing the student's skill in interviewing techniques and psychosocial assessment methods. Application of the concept of the therapeutic use of the self is facilitated through analysis of student-client interactions. Members of the Department.

33.305 NURSING SCIENCE I: HISTORY PHYSICAL ASSESSMENT LECTURE

A systems-oriented introduction to history-taking and physical assessments. Concepts will be presented in a weekly one-hour didactic session jointly taught by a physician and nurse practitioner. Members of the Department.

33.306 NURSING SCIENCE I: HISTORY PHYSICAL ASSESSMENT LABORATORY

Supervised laboratory practice sessions offer students opportunity to apply theory presented in 33.305 and to develop related technical skills. Members of the Department.

33.307 NURSING SCIENCE I: SEMINAR

Seminar provides the student with the opportunity to apply leadership skills, to share knowledge through participation, and to investigate in-depth an area of special interest. Members of the Department.

33.310 NURSING SCIENCE II: MEDICAL/SURGICAL/PSYCHIATRIC NURSING CLINICAL MODULE

Students are guided through learnings which are designed to increase clinical, interpersonal competencies, and professional growth. Experiences with hospitalized patients are selected for application of theoretical concepts. Psychosocial aspects of patient care are integrated in the plan of care for hospitalized patients and their families. The planning phase of the nursing process is emphasized. Members of the Department.

33.311 NURSING SCIENCE II: MATERNAL CHILD HEALTH/COMMUNITY CLINICAL MODULE

Students work with clients in obstetric and pediatric units, utilizing relevant theory in applying the planning phase of the nursing process. Visits to families in the child-bearing and child-rearing phase provide opportunities to observe the dynamics of family behavior and to make appropriate referrals. Members of the Department.

33.312 NURSING SCIENCE II: PSYCHOSOCIAL ASSESSMENT

Students continue to expand upon interpersonal techniques and psychosocial assessment skills. Emphasis is on developing the student's ability to form hypotheses about behavior and to develop a plan for nursing intervention which incorporates relevant theoretical concepts and research findings, as well as appropriate treatment modalities. Members of the Department.

33.313 NURSING SCIENCE II: HISTORY/PHYSICAL ASSESSMENT LECTURE

A systems-oriented course in history-taking and physical assessment, focusing on assessment of the young in accordance with curricular emphasis. Concepts will be presented in a weekly one-hour session via lectures, films, and other audio-visual resources. Jointly taught by a nurse practitioner and physician. Members of the Department.

33.314 NURSING SCIENCE II: HISTORY/PHYSICAL ASSESSMENT LABORATORY

Supervised laboratory sessions for developing physical examination skills with the application of theoretical concepts from lectures and readings. Members of the Department.

33.401 NURSING SCIENCE III: LECTURE

Continued study of the unidirectional growth pattern with emphasis on common medical and surgical problems affecting adults between the ages of forty and senescence. Normal physiological and psychosocial changes in the maturing process are studied along with changes of a pathological nature. Concepts of crisis prevention and intervention, fluid and electrolyte balance, legal aspects, safety and security needs, teaching, rehabilitation, consultation and collaboration are applied in planning nursing intervention for patients in primary, acute and long-term settings. Prerequisites: Completion of Junior level nursing courses. Members of the Department.

33.402 NURSING SCIENCE III: SEMINAR

Faculty selects seminar topics pertinent to Nursing Science III. The student assumes responsibility for assessing the learning needs of peers in relation to the topic to be presented and for promoting learning through group analysis and discussion. Members of the Department.

33.403 NURSING SCIENCE III: CLINICAL LABORATORY

Application of concepts and skills learned in previous nursing courses and nursing theory. The total nursing process is developed as students provide care to adults with common medical/surgical conditions in a variety of acute care settings. Mastery of physical assessment and other advanced nursing skills are developed. The clinical experience integrates multiple concepts such as aging, health promotion, rehabilitation, nutrition, pharmacodynamics and the teaching and research role of the nurse. The student participates in the selection of his own learning experiences based on his individual learning needs. Members of the Department.

33.404 NURSING SCIENCE III: COMMUNITY LABORATORY

Application of community and mental health principles is emphasized in this component of the course. The focus is on recognition of common health problems in community settings. Clinical placements stress long-term care in both the hospital and home. Members of the Department.

33.405 NURSING SCIENCE III: CLINICAL HISTORY/PHYSICAL EXAM RECITATION

This course offers increased depth of understanding in physical assessment. Topics will coordinate with the weekly content presented in 33.401. Periodic practicums will be arranged on an assigned basis in the community or in the physical assessment laboratory utilizing clients in the older adult age category in accordance with curricular emphasis. Corequisite: 33.401. Members of the Department.

33.406 NURSING SCIENCE IV: LECTURE

Emphasis evaluation as a continuous part of decision making in the nursing process. Examines critically the trends, methods, problems and legal implications of nursing care. Integrates (with an elementary research project) theories relating to initiation and promotion of change. Utilizing prior knowledge of the health needs of patients from 40 to senescence, the student prepares for advanced nursing practice, including team leadership. By synthesizing health assessment knowledge and skills in history-taking and physical examination and by communicating effectively with multidisciplinary team members, the student coordinates planned intervention for patient health maintenance and rehabilitation and prepares to be a self-directing professional nurse. Prerequisites: All Nursing Science I courses. Members of the Department.

33.407 NURSING SCIENCE IV: SEMINAR

Seminar method is used to focus on student selected topics relating to nursing practice. Leadership skills including interpersonal relationships, group process, and evaluation will be emphasized. Concepts relating to professional issues are analyzed to stress future trends in nursing. Members of the Department.

33.408 NURSING SCIENCE IV: A.V. SIMULATION LABORATORY

Faculty selected films, filmstrips, slides and tapes reinforce student learning in the audio-visual laboratory. This independent learning fosters understanding of health problems encountered in hospital and community settings. Members of the Department.

33.409 NURSING SCIENCE IV: CLINICAL HOSPITAL LABORATORY II

Clinical learning experiences provide the student with opportunities to synthesize, integrate and apply knowledge of human development and needs while caring for critically ill individuals and/or groups of individuals. The student begins to function as a team leader. All aspects of the professional nursing role are stressed including interdisciplinary cooperation, patient advocacy, teaching and accountability through self initiated evaluation of performance. The student will utilize current research and investigate problems requiring change within the clinical situation. Members of the Department.

33.410 NURSING SCIENCE IV: COMMUNITY LABORATORY

The student functions with greater independence in assessing a health need of an individual, family or group in a variety of community settings. Beginning research skills are applied to identify pertinent community and mental health aspects of the problem. A plan is formulated, based on investigative findings, and recommendations are made for appropriate nursing intervention. Members of the Department.

33.4121 NURSING SCIENCE IV: CLINICAL HISTORY/PHYSICAL EXAM AND PRACTICUM

This course concludes the four semester course on history-taking and physical assessment. Building on the skills and theory of physical assessment and all other nursing courses, this class will cover selected topics dealing with integration of expanded skills into current nursing practice. Learner identified areas of interest will be presented by small groups to class with the assistance of the instructor and outside consultants. Practicums will be conducted with patients from a variety of age ranges in community and acute-care agencies. Members of the Department.

CRIMINAL JUSTICE

44.101 THE CRIMINAL JUSTICE SYSTEM

A survey of the Criminal Justice System. The course includes a brief history of the Criminal Justice system and an analysis of its structures and function. One session per week, 3 credits.

44.131 PRINCIPLES OF LAW AND THE LEGAL SYSTEM

An introduction to the legal system, including the legal structure, criminal law, constitutional law, and individual rights. One session per week, 3 credits.

44.141 POLICE FUNCTIONS: THEORY AND APPLICATION

An examination of the historical development of policing, with special emphasis on the conflicting role expectations facing the police officer. One session per week, 3 credits.

44.151 INTRODUCTION TO CORRECTIONS I

A comprehensive study of theory, practice and philosophy involved in the treatment of convicted law violators of all ages. One session per week, 3 credits.

44.152 INTRODUCTION TO CORRECTIONS II

An examination of the role of correction in the total process of adjudication, with emphasis on the history of correctional practices and the evolution of the rehabilitative philosophy. One session per week, 3 credits.

44.161 JUVENILE DELINQUENCY

Proposed causative factors in the development of youthful offenders will be examined. The development and philosophy behind treatment of juveniles — such as status offenses. The juvenile court and clinic, and training schools, as well as contemporary innovative practices — will be covered. One session per week, 3 credits.

44.221 CRIMINOLOGY I

The definition and nature of crime, criminal statistics, and a survey of approaches to theories of crime causation will be included. One session per week, 3 credits.

44.222 CRIMINOLOGY II

An examination of key theories of criminal behavior, both historical and contemporary, and their impact on the evolution of punishment, treatment and rehabilitative practices. One session per week, 3 credits.

44.231 JUVENILE COURT PHILOSOPHY AND PRACTICE

Examinations of the civil procedures used in the juvenile court as opposed to the adversary pro-

cedures used in criminal court, together with a history of the development of the juvenile court and an examination of the constitutional basis of the juvenile court. One session per week, 3 credits. Prerequisite: 44.161.

44.234 CRIMINAL LAW

The historical development and origin of criminal law beginning with common law to contemporary decisions and statutes. Constitutional and statutory factors as they pertain to crime, defense and crimes against persons and property will be considered. In addition, attention is directed toward limitations of criminal responsibility, capacity and the law of arrest. Sections of the Massachusetts Criminal Code and other statutes will be covered where applicable. One session per week, 3 credits.

44.235 YOUTH AND THE LAW

A study of the laws relating to juveniles, including the police rule, intake and detention procedures, diversion, and juvenile court action. One session per week, 3 credits.

44.241 COMPARATIVE POLICE SYSTEMS

A study of various police systems on a national and international level and a comparison to localized systems as they relate to the organization, structure, and administration of Law Enforcement Agencies. Agencies in Europe, United Kingdom, Russia, and other parts of the United States will be reviewed. One session per week, 3 credits.

44.243 CRIMINALISTICS I

Principles and procedures regarding arrest, search and seizure and the gathering of evidence and its evaluation regarding admissability, weight, and competence as it pertains to a scientific approach in gathering such evidence. One session per week, 3 credits.

44.244 CRIMINALISTICS II

Collection, identification, preservation, and transportation of physical evidence. The crime laboratory and its effectiveness, capability and limitation in assisting the police enforcement officer in examining and utilizing physical evidence as a means of conviction and/or apprehension. One session per week, 3 credits. Prerequisite: 44.243.

44.251 ALTERNATIVES TO CORRECTIONS I

Modern trends in corrections, such as the community based programs in work-release, half-way houses, parole clinics, the therapeutic community and treatment team concept in institutions are described and evaluated. One session per week, 3 credits.

44.252 ALTERNATIVES TO CORRECTIONS II

An extension of Alternatives to Corrections I, with emphasis placed on supervised field work in various correctional agencies and the Courts, periodic conferences, and reports on field assignments. Assigned readings on related topics correlated with field experience will be required. One session per week, 3 credits. Prerequisite: 44.251.

44.253 PROBLEMS OF MISDEMEANANTS

The problems of correctional programming for the short-term offender will be examined, with special emphasis on alcoholism, prostitution, homeless persons, and related problems. One session per week, 3 credits.

44.254 PROBATION AND PAROLE I

The historical development of both probation and parole and an examination of their places in the criminal justice system, supplementing the traditional punishments. One session per week, 3 credits.

44.255 PROBATION AND PAROLE II

Specific emphasis on recent trends, including diversion, flat sentencing, weekend sentencing, and the issues challenging these traditional practices. One session per week, 3 credits. Prerequisite: 44.254.

44.331 PENAL LAW

A study of the constitutional rights of incarcerated individuals, including privileges of offenders, major policy issues and trends associated with completed and current revisions of penal codes as related to recent court decisions for the preservation of offenders' rights will be covered. One session per week, 3 credits.

44.371 CRIMINAL JUSTICE MANAGEMENT AND PLANNING

An introduction to the principles of administration, including planning, budgeting, grantsmanship and evaluation, as they relate to the criminal justice manager. One session per week, 3 credits.

44.372 ISSUES IN CORRECTIONAL ADMINISTRATION

Specific analysis of the management of correctional institutions, including custody, classification, reception, programming, release, staffing, scheduling, collective bargaining, and other related issues. One session per week. Prerequisite: 44.371.

44.373 ISSUES IN POLICE ADMINISTRATION

Specific analysis of the management of a contemporary police force, including staffing, scheduling, training, collective bargaining, community relations and other related issues. One session per week, 3 credits. Prerequisite: 44.371.

44.390 INTRODUCTION TO CRIMINAL JUSTICE RESEARCH

An overview of the role of research in the criminal justice system, including terminology, standard methodologies, and elementary statistics. One session per week, 3 credits.

44.401 SEMINAR ON DRUGS

The course objective is designed to cover the problems of drugs, drug abuse, the law and its application. Treatment of and alternatives to drug rehabilitation will be studied in addition to the classification, identification, distribution, and control of drugs. One session per week, 3 credits.

44.490 CRIMINAL JUSTICE RESEARCH SEMINAR

Specific practice in the definition, design and execution of a research project, and an analysis of the impact of contemporary criminal justice research on policy development. One session per week, 3 credits.

44.496 PRACTICUM—FIELD EXPERIENCE I

Assigned field work under supervision and with permission of Coordinator designed to broaden the educational experience of pre-service students in law enforcement and corrections by providing exposure in selected correctional, law enforcement, probation and parole agencies within the area. This course is designed to provide a correlation of theoretical knowledge with practical experience in an area of particular interest to the student. One session per week, 3 credits.

AREA I: BEHAVIORAL AND SOCIAL SCIENCES

43.105 WESTERN CIVILIZATION TO 1715

Traces the major forces in the development of European history from the fall of the Roman Empire to 1715. One session per week, 3 credits.

43.106 WESTERN CIVILIZATION SINCE 1715

Examines the major forces in the development of modern European history from the French Revolution to the present. One session per week, 3 credits.

43.111 UNITED STATES HISTORY TO 1877

Traces the development of American history and institutions from the colonization to the end of Reconstruction. (not open to history concentrators). One session per week, 3 credits.

43.112 UNITED STATES HISTORY SINCE 1877

Examines significant developments in American history from the end of the Reconstruction period to the present. (not open to history concentrators). One session per week, 3 credits.

43.205. PRE-COLUMBIAN AMERICA

A study of the peoples and civilizations of the Americas from their origins to first contact with Europeans. One session per week. 3 credits.

43.237 AMERICAN ENVIRONMENTAL HISTORY

Attitudes, policies and behavior of Americans and their government toward the environment. Special attention to current issues evolving out of our past attitudes and policies. One session per week, 3 credits.

43.239 AMERICAN ECONOMIC HISTORY

A study of the growth and development of the American economy from its European origins to the present. One session per week, 3 credits.

43.277 ETHNIC GROUPS IN AMERICAN LIFE

An examination of the importance of ethnic groups in American history. The course will treat several major ethnic groups and assimilation or non-assimilation into American life. Field work and research on ethnic groups in the Merrimack Valley. One session per week, 3 credits.

43.304 RECENT U.S. HISTORY, 1940 TO THE PRESENT

The involvement of the U.S. in World War II marks a major turning point in American history. It ushers in twenty years of Cold War tensions, the militarization of society and participation in foreign alliances and limited wars. Anti-communist conservatives, militant Blacks and a New Left polarize politics and produce a contemporary crisis of confidence in American society. One session per week, 3 credits.

43.312 CURRENT LATIN AMERICAN PROBLEMS

An analysis of significant trends and problems of Latin America, with emphasis on the cultural, economic, political, and social conditions which stimulate or deter progress. One session per week, 3 credits.

43.313 AMERICAN SOCIAL HISTORY TO 1880

Selected topics in American social history, including mobility and class structure in American life, American religions, ideals of family life and child rearing, race and ethnic groups in American life, myths and reality in American economic life. One session per week, 3 credits.

43.314 AMERICAN SOCIAL HISTORY SINCE 1880

A continuation of the preceding. One session per week, 3 credits. Prerequisite: 43.313 or permission of the instructor.

43.316 HISTORY OF LOWELL

An examination of the history of industry, politics and the culture of the city of Lowell. Work will be done largely in original sources and a research project is required. One session per week, 3 credits.

43.318 THE AMERICAN FRONTIER

Readings and discussion of the history of the American society and thought. One session per week, 3 credits.

43.320 CONTEMPORARY AMERICAN FOREIGN POLICY

A study of the process of American foreign policy in the contemporary world. The case study method will be used to illustrate problems of strategy and tactics in such areas as Europe, Latin America, Africa and the Near East. One session per week, 3 credits.

43.324 THE RISE OF AMERICAN INDUSTRIAL SOCIETY

Selected topics in the economic history of the United States. Topics include: railroads and the development of a national market, the exploitation of national resources, the rise of new industries, the problems of labor, the consolidation of business, and the problems of agriculture in the new industrial state. One session per week, 3 credits.

43.365 THE AMERICAN INDIAN

A study of native Americans from their first contact with Europeans to the present, with special emphasis on North American Indians and their relationship with the United States government. One session per week, 3 credits.

46.101 INTRODUCTION TO AMERICAN POLITICS

An introductory analysis of the structures, functions, and behavior of the American political community. The analysis will emphasize politics and political behavior at the national level. One session per week, 3 credits.

46.121 INTRODUCTION TO INTERNATIONAL RELATIONS

Survey of some recent methods and approaches used in the study of international politics and the introduction of current problems of foreign policies of major world powers. One session per week, 3 credits.

46.131 INTRODUCTION TO LAW AND THE LEGAL SYSTEM

An introduction to the nature and operation of the American Legal System; consideration of its political and social functions. Examination of the structure, behavior and process as well as doctrine drawn from several areas of civil, criminal and constitutional law. Required for Criminal Justice majors. One session per week, 3 credits.

46.195 CONSTITUTIONAL LAW AND CIVIL LIBERTIES

An introductory examination of selected major contemporary civil liberties issues and the American process of constitutional adjudication through a study of Supreme Court decisions and related readings. Emphasis on study, debate, and discussion of the continuing "first amendment" controversies, establishment and free exercise of religion, free speech, free press, obscenity academic freedom, etc. Attention also to the expansion of procedural guarantees, primarily in the area of criminal justice. One session per week, 3 credits.

46.196 CONSTITUTIONAL LAW AND CIVIL RIGHTS

An introductory examination of selected major current civil rights problems and the American process of constitutional adjudication through a study of Supreme Court decisions and related readings. Primary emphasis on study, debate, and discussion of the developing equal protection controversies and the "affirmative" remedies that have arisen from judicial efforts to command equality in areas such as school desegregation, sex discrimination, affirmative action, and legislative reapportionment. Attention also to other developing areas such as privacy, abortion, etc. One session per week, 3 credits.

46.256 AMERICAN PUBLIC ADMINISTRATION

A study of the bureaucratic organization and behavior in the American society. The course covers the Federal Administration in process with a particular emphasis on the problems of bureaucratic authority versus democracy and social change. One session per week, 3 credits.

46.282 CONTEMPORARY POLITICAL THEORY

An examination of major ideological currents in the contemporary world. Marxism, communism, fascism, anarchism, and the relevance of Freud to modern political thought are some of the possible topics for examination. One session per week, 3 credits.

46.344 THE AMERICAN PRESIDENCY

An examination of the nature of the American Presidency and its functioning within the American political system. Specific attention will be given to the problems and the evolution of the Presidency since World War I. One session per week, 3 credits.

47.101 GENERAL PSYCHOLOGY

A basic introductory course, primarily for non-concentrators, surveying the major areas of psychology, including the nature of psychology as a science, learning, human development and personality, perception, and motivation, behavioral disorders, and social behavior. One session per week, 3 credits.

47.163 DEVELOPMENTAL PSYCHOLOGY

Primarily for non-concentrators, this course surveys the major stages and processes in human development from birth to death. One session per week, 3 credits.

47.209 SOCIAL PSYCHOLOGY

An introduction to the study of social behavior in interpersonal relationships, groups, organizations, and the community. Topics include attitudes and attitude change, group dynamics, leadership, and inter-personal influences. One session per week, 3 credits.

47.232 THEORIES OF PERSONALITY

A survey of the major theories of personality, beginning with Freud and psycho-analysis, the neo-Freudians, existential psychology, humanistic theories of Rogers and Maslow, and behavioristic and social learning theories. The interplay between theory and research is also considered. One session per week, 3 credits.

47.272 ABNORMAL PSYCHOLOGY

An introduction to the study of various patterns of neurotic, psychotic, and character disorders. Therapeutic techniques and other auxiliary methods for the treatment of such disorders are studied in relation to contemporary theory and research. One session per week, 3 credits. Prerequisite 47.101.

47.238 DYNAMICS OF INTERPERSONAL RELATIONS

An analysis of psychological dynamics in interpersonal behavior, emphasizing such topics as conformity, leadership, interpersonal growth, self-disclosure, personal styles of interaction, and technique of change. The primary focus will be on the behavior of the students themselves who form a small group in which they are expected to participate. The course is taught without a formal prerequisite, but students should have some previous course work in psychology. One session per week, 3 credits.

47.364 PSYCHOLOGY OF CRIME AND CORRECTIONS

An investigation of the psychological aspects of crime and deviance, and the nature of punishment and rehabilitation. Clinical case histories or criminal personalities will be combined with experimental studies of anti-social and violent behavior. The nature of prisons and criminal justice will also be examined. One session per week, 3 credits. Prerequisite: 47.272.

48.101 INTRODUCTION TO SOCIOLOGY

This is the basic course in sociology. Emphasis is directed at the ways in which social institutions such as government, schools, the economy, social class, and the family develop and influence our lives. It is concerned not only with presenting various ways to understand our relationship to society, but also with ways to change it. One session per week, 3 credits.

48.201 SOCIAL ANTHROPOLOGY

Using the comparative approach to the study of society, this course examines several distinct cultures as a means of understanding both the universal constants and the variations in human societies. One session per week, 3 credits.

48.231 THE SOCIOLOGY OF THE FAMILY

A study of the nature of the family in contemporary society with particular emphasis on the family in America. What functions does the family perform in modern society? How is it changing? How do these changes affect our lives? One session per week, 3 credits.

48.294 FUTURISTICS: THE STUDY OF ALTERNATIVE FUTURES

An introduction to the study of alternative futures which examines the many facets of the futures field: a procedure for study; the nature of time; methods, change, and forecastability; confidence in forecasts; attitudes toward casualty and the manageability of futures; transcendental change and stability. Assignments relate to personal investigations of the future. One session per week, 3 credits.

48.296 FUTURISTICS: MATERIAL TRENDS

An investigation of the technology-oriented society using science-fiction works of sociological importance and related scholarly texts to focus on such topics as population, ecology, man vs. the machine, the automobile in the future, and future cities. Preference to juniors. One session per week, 3 credits.

48.297 FUTURISTICS: SOCIAL AND POLITICAL TRENDS

A continuation of 48.296 critiquing the technology-oriented society using science-fiction works of sociological importance and related scholarly texts to focus on such topics as slicing the economic pie, social order and control, prejudice, the generation gap, and our destiny. Preference to juniors. One session per week, 3 credits.

48.298 FUTURISTICS: TOWARDS THE MATURE SOCIETY

A course diagnosing the future of the technology-oriented society with the object of prescribing remedies. Beginning with the theme: mankind is in obsolescence, students examine utopian and anti-utopian works focusing on their relevance to American society. A laboratory experience with a troubled simulated society (SIMSOC) follows where the class tries to create a utopia. Course ends with practical work in alternative life style investigations. One session per week, 3 credits.

48.334 THE STUDY OF MINORITIES

This course examines the process of immigration and majority-minority relations in the U.S. over the last century with particular emphasis on the process of adaptation in a pluralistic society. One session per week, 3 credits. Prerequisite: 48.101.

48.341 SOCIAL STRATIFICATION

This course focuses on the phenomenon of social class distinctions with particular emphasis on social class in America. The approach taken is both historical and sociological. One session per week, 3 credits. Prerequisite: 48.101.

48.345 URBAN SOCIOLOGY

This course deals with issues related to the quality of life in American cities. Students taking this course may engage in research projects on the city of Lowell and the role of the University of Lowell within that city. One session per week, 3 credits.

48.351 THE SOCIOLOGY OF HEALTH AND HEALTH CARE

A historical and contemporary study of the socio-politics of health, illness, and the health care industry in the United States. Attention is given to providers, consumers, owners, workers, and professionals in terms of their power, class, race, sex, and age. Reforms and alternatives are considered. One session per week, 3 credits. Prerequisite: 48.101 or permission of instructor.

48.356 POLITICAL SOCIOLOGY

This course focuses on the development and use of power in modern society. Emphasis is placed on the relationship of American political institutions to economic institutions, to social class, and to supporting ideologies. One session per week, 3 credits. Prerequisite: 48.101 or permission of instructor.

88.110 MAN AND HIS ENVIRONMENT

An inter-disciplinary study of the technological, scientific, psychological, economic and sociological response of man to his environment. Case studies include world, regional and local issues and problems. One session per week, 3 credits.

AREA II: FINE ARTS AND THE HUMANITIES

42.100 FUNDAMENTALS OF ENGLISH

A study of the fundamentals of the English language, including vocabulary, phraseology, grammar, sentence structure and composition, and paragraph development and organization. One session per week, 3 credits.

42.101 COLLEGE WRITING

This course will be concerned with the preparation of expository and argumentative essays, and with the critical reading of non-fiction; it will include a study of the techniques and documentation of research. One session per week, 3 credits.

42.102 COLLEGE WRITING AND LITERATURE

This course will be concerned with written and classroom work that reinforces the substance of 42.101. Imaginative literature representative of the major types will be studied as a basis for further developing competence in writing. One session per week, 3 credits.

NOTE: Before enrolling in any English course numbered 42.110 or higher, students must complete 42.101, 42.102 to fulfill the University requirement of 6 hours in composition.

42.111 TECHNICAL AND BUSINESS WRITING

A study of the theory and practice of letters, memoranda, and reports on specific business and technical problems. Registration preference for students enrolled in Business and Management programs. One session per week, 3 credits.

42.112 TECHNICAL AND SCIENTIFIC WRITING

A study of theory and practice of letters, memoranda, and reports on specific scientific and technical problems. Registration preference for students enrolled in the Engineering Technology and Science programs. One session per week, 3 credits.

42.201 GREAT BOOKS OF ANTIQUITY

Representative literary selections from the Bible, classical Greece and imperial Rome are studied as embodiments of ancient views of life and reality. One session per week, 3 credits.

42.203 GREAT BOOKS OF THE MODERN PERIOD

Representative literary selections from the period of the Enlightenment to the present are studied as embodiments of modern views of life and reality. One session per week, 3 credits.

42.212 THE SHORT STORY

A study of the development of the genre. One session per week, 3 credits.

42.216 THE MYSTERY STORY

A study of the genre from Poe to the present. One session per week, 3 credits.

42.272 AMERICAN LITERATURE OF THE TWENTIETH CENTURY

A study of twentieth century American short stories, novels, poetry and drama. One session per week, 3 credits.

42.273 BRITISH LITERATURE OF THE TWENTIETH CENTURY

A study of British short stories, novels, poetry, and drama. One session per week, 3 credits.

42.291 HISTORY OF ENGLISH LITERATURE I

A study of the historical development of English literature from the beginnings to Milton. Selected works by representative authors from each period are studied. One session per week, 3 credits.

42.292 HISTORY OF ENGLISH LITERATURE II

A study of the historical development of English literature from Dryden to the beginning of the twentieth century. One session per week, 3 credits.

42.293 HISTORY OF AMERICAN LITERATURE I

A study of the historical development of American literature from the Colonial period to the Civil War. Selected works by representative authors from each period are studied. One session per week, 3 credits.

42.294 HISTORY OF AMERICAN LITERATURE II

A study of the historical development of American literature from the Civil War to World War I. One session per week, 3 credits.

42.362 MODERN DRAMA

A study of selected continental, British and American, plays of the late nineteenth century to the present. One session per week, 3 credits.

45.201 INTRODUCTION TO PHILOSOPHY

A examination of some of the typical approaches to philosophical questioning and the issues raised in such inquiry: what is true knowledge, what is reality, what is the good, what is the right political order, what is the nature of religious faith? One session per week, 3 credits.

45.203 LOGIC AND PHILOSOPHY

This course is devoted to an exploration of the implications of formal logic for the resolution of traditional philosophical questions concerning the nature of reality. The first half of the course will be spent in developing facility in the techniques of formal deduction. Subsequently, these techniques will be applied to the analysis of philosophical texts. Finally, logic, art and religion will be contrasted as offering different modes of access to being. One session per week, 3 credits.

45.205 SYMBOLIC LOGIC

After a brief introduction to the principles of propositional logic and elementary quantification, attention will be focused upon the nature of formal deductive systems, wherein a systematic development of the propositional calculus will first be presented, followed by the construction of a first-order function calculus. One session per week, 3 credits.

50.101 BEGINNING FRENCH I*

Development of fundamental skills in oral expression, aural comprehension, reading and writing. Tapes available for laboratory use. Students who have completed more than one year of French at the secondary level are ineligible for this course. One session per week, 3 credits.

50.102 BEGINNING FRENCH II*

A continuation of 50.101, which is a prerequisite. One session per week, 3 credits.

50.211 INTERMEDIATE CONVERSATIONAL FRENCH I*

Review of basic grammatical structures and idiomatic patterns with emphasis upon increased proficiency in oral expression and aural comprehension. This course is intended for students who have completed two years of high school French, preferably during their junior and senior years, for students who have completed 50.102. One session per week. 3 credits.

50.212 INTERMEDIATE CONVERSATIONAL FRENCH II*

A continuation of 50.211, which is a prerequisite, with emphasis upon continued development of comprehension and conversational skills. One session per week. 3 credits.

51.101 BEGINNING GERMAN I*

Development of fundamental skills in oral expression, aural comprehension, reading and writing. Tapes available for laboratory use. Students who have completed more than a year of German at the secondary level are ineligible for this course. One session per week, 3 credits.

51.102 BEGINNING GERMAN II*

A continuation of 51.101, which is a prerequisite. One session per week, 3 credits.

52.376 PIRANDELLO: HIS THEATER AND INFLUENCE

A course devoted to the major dramatic works of Pirandello which have established his reputation as an entertainer and a social critic with special emphasis upon his notion of appearance vs. reality and his influence upon contemporary French drama. Conducted in English. One session per week, 3 credits.

52.379 20th CENTURY ITALIAN CINEMA

A guide to contemporary Italian cinema and Italian directors. The works of central figures will be examined. Emphasis will be given to Fellini, DeSica, Bertolucci, Visconti, Wertmuller, Pasolini, Antonioni. Conducted in English. One session per week, 3 credits.

54.101 BEGINNING SPANISH I*

Development of fundamental skills in oral expression, aural comprehension, reading and writing. Tapes available for laboratory use. Students who have completed more than one year of Spanish at the secondary level are ineligible for this course. One session per week, 3 credits.

54.102 BEGINNING SPANISH II*

A continuation of 54.101, which is a prerequisite. One session per week, 3 credits.

54.211 INTERMEDIATE CONVERSATIONAL SPANISH I*

A review of Spanish grammar and syntax with emphasis upon increased proficiency in aural comprehension and oral expression. This course is intended for students who have completed two years of high school Spanish, preferably during their junior and senior years, for students who have completed 54.102, and for students who are unqualified for the 221-222 sequence. One session per week, 3 credits.

*Beginning and intermediate language courses at the 101-102 and 211-212 levels must be elected for two consecutive semesters and in the prescribed sequence. College credit may not be granted for one semester of such courses unless exception is permitted by the Chairperson of the Department of Languages on the basis of student placement in a more advanced language course.

54.212 INTERMEDIATE CONVERSATIONAL SPANISH II*

A continuation of 54.211, which is a prerequisite, with emphasis upon continued development of comprehension and conversational skills. One session per week, 3 credits.

54.245 ADVANCED SPANISH CONVERSATION

Advanced oral fluency in rapid and idiomatic speech. Topics of contemporary significance will be selected from contemporary prose. One session per week, 3 credits.

54.254 TOPICS IN CONVERSATIONAL SPANISH

Discussion of a wide spectrum of contemporary topics with the object of continuing to develop facility and accuracy of expression. Prerequisite: advanced level proficiency. One session per week, 3 credits.

57.255 DRAWING I STUDIO

A foundation course in basic concepts and techniques using a variety of drawing media. The emphasis is on realism and its application to the realm of ideas. A wide range of assignments are given to develop graphic expression. One session per week, 3 credits.

57.271 PAINTING I STUDIO

Oil painting techniques are taught as vehicles for serious creative expression. A variety of assignments will be given to help the student gain proficiency in the use of color technique and subject matter. One session per week, 3 credits.

58.101 APPRECIATION OF THE VISUAL ARTS

An analysis of the visual elements used in art such as color, line and shape. Emphasis is placed on modes of representation, styles, media, technical procedures and principles of design. One session per week, 3 credits.

58.202 SURVEY OF ART

A survey of the origins and development of painting, sculpture and architecture from prehistoric times to the present. Emphasis is placed on representative works of art from Antiquity, Byzantine, Medieval, Renaissance and Modern periods. One session per week, 3 credits.
